L. ROBIN KELLER

BACKGROUND

Address

The Paul Merage School of Business (949) 824-6348 (Office)
University of California, Irvine LRKELLER@uci.edu
SB2 300 (Mail), SB2 327 (Office) <http://www.merage.uci.edu/go/Keller>
Irvine, California 92697-3125 <http://faculty.sites.uci.edu/lrkeller/>

Education

Ph.D. UCLA Anderson Graduate School of Management, September 1982
Management Science major with specialization in decision analysis, Marketing minor field
Committee Chairs: Dr. Rakesh Sarin and Dr. Moshe Rubinstein
M.B.A. UCLA Anderson Graduate School of Management, June 1976, Management Science
Major, Thesis: "Customer Needs of First Los Angeles Bank"
B.A. UCLA, June 1974, Mathematics major

Professional History

PROFESSOR OF OPERATIONS AND DECISION TECHNOLOGIES

The Paul Merage School of Business, University of California, Irvine
Professor Emerita, March 2022-

Full Professor, July 2001- **February 2022** (Step VI awarded 7/2017)

Assistant Professor, 1982-89; Associate Professor, 1989-2001

ADMINISTRATIVE ROLES AT UCI:

UC Irvine Campus

Co-chair, Academic Planning Group's Work Group on Merit and Promotion in the Context of a Pandemic, 2020-21

Council on Academic Personnel, Sept. 2016-July 2019; Reserve CAP, 2021-22

Institute for Mathematical Behavioral Sciences, Affiliated Faculty Member

Executive Committee, 1991-Dec. 2009; Recruiting Committee, 2005-06

John S. and Marilyn Long U.S.- China Institute for Business and Law, Affiliated Faculty

Compliance Lab, UCI Law School, Affiliated Faculty, beginning summer 2016

Graduate Council (oversees graduate programs), 4/92-6/93; Fall 2002-Spring 2004

Chair, Campus Review Committee for UCI Dept. of Education, 2002-04

Committee on Committees, 1995-96, 1999-2000, 2005-06

Ad hoc Conflict of Interest Oversight Committee, 12/95-1997

Conflict of Interest Task Force Committee, 1997-98

Affiliated member of Center for Health Care Management and Policy (when founded in 2004)

Affiliated Core Faculty Member, Institute of Transportation Studies, 2006-on

Graduate Dean's Dissertation Fellowship Review committee chair, Spring 2010

UCI Greek Woman/Man of the Year Judge, January 2014

UCI Test of English Proficiency (TOEP), frequent faculty grader (now faculty do not grade)

Merage School of Business (formerly Graduate School of Management)

Task Force on Teaching Equity & Excellence, Chair, 2016

Member, Search Committee for Merage School Dean, 2013-14

Recruiting Committee for Long Chair in Business/Law, 2011-13

Associate Dean, Full-Time MBA program, 8-06 to 6-30-08

Associate Dean for Research, 1992-93

Director, Doctoral Program, 1985-86, 2009-2013

Chair, Ph.D. Program committee; Oversee PhD Brown Bag Series

Host Annual Welcome Lunch and Alumni Panel in Fall '09-'12

Host Annual Ph.D. Research Fest in Spring '10-'13
 Recruit US diversity students: PhD Project Conference, November '10, '11, '12
 Ph.D. Committee, 2002, 2020-21
 Dean's Faculty Advisory Committee, 2000-2001
 Faculty Board (Personnel and advises Dean), 1997-98
 Chair, Personnel (promotion and tenure) Committee, 1992-93; Member, 1991-92
 Executive Committee (advises Dean), 1994-95
 Masters Program Committee, 1996-98, '19-'20; chair, 2002-04, 05-06
 Chair, Task Force on AACSB Accreditation, 1998-99
 Chair, GSM Computing Committee, 1999-2000
 Voting Rules Task Force, Winter 2001
 Organizations and Strategy Recruiting Committee, 2002-03
 Economics Recruiting Committee, 2003-04
 MBA Focus Committee, 2004; Curriculum Innovation Committee, 2005-06
 Operations and Decision Technologies Area
 Area Coordinator, '94-5, '96-7, '97-8, '02-3, '03-4, S '09, S '10, S '11, F '12, W '13, F '18, F '20, W '21
 ODT Recruiting Committee, '01-02, '03-04, '04-05, '09-10, '11-'12, '12-'13, '18-'19 (co-chair)
 Colloquium Coordinator, most recently in 1991-92
 Chair, Irvine Conference on Operations Research & Operations Management in the
 Information Technology Era, 2000

SABBATICAL, COURTESY, VISITING AND OTHER APPOINTMENTS:

President-elect (2014), President (2015), Past-President (2016), INFORMS
 (Institute for Operations Research and the Management Sciences)
 Editor-in-Chief, *Decision Analysis*, January 2007-Dec. 2012, published by INFORMS

United States National Academies Committee Memberships:

Committee to Assess the Distribution and Administration of Potassium Iodide in the Event of a Nuclear Incident, Board of Radiation Effects Research, Division of Earth and Life Studies, National Research Council of the National Academies, 2003-2004.

U. S. National Committee for the International Institute for Applied Systems Analysis (IIASA), Board on International Scientific Organizations; January 2007-December 2012 (2 terms).
<http://sites.nationalacademies.org/PGA/biso/IIASA/index.htm>

Committee on Ranking FDA Product Categories Based on Health Consequences, Phases I & II, 2008-11. Under the [Board on Environmental Studies & Toxicology](#) in the [Studies under the IOM Executive Office](#), Institute of Medicine of the National Academies; the IOM is the health arm of the National Academy of Sciences.
Results of Phase I, reported in a Letter report, February 17, 2009
Ranking FDA Product Categories Based on Health Consequences, Phase II
 Full book available online in May 2011.

**National Research Council of the National Academies Expert Meeting
 Empowering the Miner: Gaps and Needs- A Meeting of Experts**

Served as an invited expert for this "think tank" meeting, held to discuss how decision science, particularly in risky situations, can help to inform miner safety. The National Institute for Occupational Safety and Health (NIOSH) - Office of Mine Safety and Health Research asked the National Research Council to put together this meeting of experts at the Beckman Center in Irvine, CA on Feb. 19-20, 2014.

Committee for a Study of Performance-Based Safety Regulation, Transportation Research Board, National Academies, 2/2/2016-8/31/2017, full book available 10/2017.
<https://www8.nationalacademies.org/cp/CommitteeView.aspx?key=49767>

USC Scientific Advisory Committee member, Homeland Security Center for Risk and Economic Analysis of Terrorist Events (CREATE), June 2005-October 2010.

UC Santa Cruz (Proposed) School of Management Academic Advisory Group, 2007-2010.

UCLA Visiting Scholar John E. Anderson Graduate School of Management, Fall 1993-Winter 1994.

NSF Program Director National Science Foundation, Washington, D.C.; Decision, Risk, and Management Science Program, August 1990 - July 1991; Associate Program Director, August

1989-July 1990. Managed review of grant proposals from a \$3.23 million annual budget and provided direction for research in decision analysis, risk analysis, and management science.
UCI Assistant Professor of Social Sciences, 1987-89, courtesy joint appointment
Duke Visiting Assistant Research Professor The Fuqua School of Business, Spring 1987

Leonhardt received a finalist award in the 2013 Decision Analysis Society of INFORMS Student Paper competition for this paper.

Uncertainty-seeking behavior is currently understood as the result of loss aversion which motivates a preference for the possibility to avoid or lessen an otherwise sure loss. However, when choosing among negative options on behalf of others, we offer responsibility aversion as another possible motive for uncertainty-seeking behavior. Within our conceptual model, responsibility aversion is defined as the preference to minimize one's causal role in outcome generation. Compared to certain options, uncertain options lessen the decision maker's causal role in outcome generation because the outcomes are partially determined by chance. The presence of chance increases indirect agency on behalf of the decision maker and lessens his or her perceived risk of responsibility. The results of five studies support a responsibility aversion motivation behind uncertainty-seeking behavior.

<http://www.sciencedirect.com/science/article/pii/S1057740811000283>.

When consumers mentally unpack (i.e., imagine) the reasons for product failure, their probability judgments of future product failures are higher than when no mental unpacking is undertaken. However, increasing the level of mental unpacking does not lead to monotonically increasing effects on probability judgments but results in inverted U-shaped relationships. Using a two-factor structure, we propose that when consumers undertake mental unpacking, there will be two conflicting processes; while imagining causes for an event will lead to greater perceived probability, the greater difficulty in generating reasons for an event will lead to lower perceived probability.

36. Yitong Wang (UCI Merage doctoral alumnus, Assistant Professor, Tsinghua University when accepted, became a Lecturer (i.e., assistant professor) and Senior Lecturer (early-stage Assoc. Published on 11-24-13 in 'Online First' on SpringerLink.

Individual valuation of a binary lottery at values less than the lottery's worst outcome has been designated as the "uncertainty effect". Our paper aims to explore the boundary conditions of the uncertainty effect by investigating a plausible underlying process and proposing two possible methods. First, we examine how providing an exogenous evaluation opportunity prior to judging the value of the lottery affects individuals' judgments, and find that first valuing the worst outcome and then the lottery eliminates the uncertainty effect. Second, we explore if introducing additional cognitive load dampens how far decision makers correct their initial evaluations, and find that additional cognitive load is able to eliminate the uncertainty effect.

"An Empirical Study of the Toxic Capsule Crisis in China: Risk Perceptions and Behavioral Responses," 34(4) 698-710, Risk Analysis, accepted 6-18-2013, online in early view on 7-16-13, doi: 10.1111/risa.12099, <http://onlinelibrary.wiley.com/doi/10.1111/risa.12099/abstract>. (Request print copy from author, only working paper version can be posted online 6 months after print.)

The outbreak of the toxic capsule crisis during April 2012 aroused widespread public concern about the risk of chromium-contaminated capsules and drug safety in China. In this paper, we develop a conceptual model to investigate risk perceptions of the pharmaceutical drug capsules and behavioral responses to the toxic capsule crisis and the relationship between associated factors and these two variables. An online survey was conducted to test the model, including questions on the measures of perceived efficacy of the countermeasures, trust in the State FDA (Food and Drug Administration), trust in the pharmaceutical companies, trust in the pharmaceutical capsule producers, risk perception, concern, need for information, information seeking, and risk avoidance. In general, participants reported higher levels of risk perception, concern, and risk avoidance, and lower levels of trust in the three different stakeholders. The results from the structural equation modeling procedure suggest that perceived efficacy of the countermeasures is a predictor of each of the three trust variables; however, only trust in the State FDA has a dampening impact on risk perception. Both risk perception and information seeking are significant determinants of risk avoidance. Risk perception is also positively related to concern. Information seeking is positively related to both concern and need for information. The theoretical and policy implications are also discussed.

This paper presents decision analysis methodology for decisions based on data from geographic information systems. The consequences of a decision alternative are modeled as distributions of outcomes across a geographic region. We discuss conditions which may conform with the decision maker's preferences over a specified set of alternatives; then we present specific forms for value or utility functions that are implied by these conditions. Decisions in which there is certainty about the consequences resulting from each alternative are considered first; then probabilistic uncertainty about the consequences is included as an extension. The methodology is applied to two hypothetical urban planning decisions involving water use

and temperature reduction in regional urban development, and fire coverage across a city. These examples illustrate the applicability of the approach and the insights that can be gained from using it.

Accepted 2-28-2015. Available online on 10 March 2015. <http://www.sciencedirect.com/science/article/pii/S0090825815006769#>.

Objective: To evaluate the cost-effectiveness of bevacizumab in recurrent/persistent and metastatic cervical cancer using recently reported updated survival and toxicology data.

Methods: A Markov decision tree based on the Gynecologic Oncology Group 240 randomized trial was created. The 2013 MediCare Services Drug Payment Table and Physician Fee Schedule provided costs. In the 5-year model subjects transitioned through the following states: response, progression, minor complications, severe complications, death. Patients experiencing a health utility per month according to treatment effectiveness were calculated. Because cervical cancer survival is measured in months rather than years, results were reported in both quality adjusted cervical cancer life months and years (QALmonth, QALY), adjusted from a baseline of having advanced cervical cancer during a month.

Results: The estimated total cost of therapy with bevacizumab is approximately 13.2 times that for chemotherapy alone, adding \$73,791 per 3.5 months (0.29 year) of life gained, resulting in an incremental cost-effectiveness ratio (ICER) of \$21,083 per month of added life. The ICER increased to \$5,775 per month of added life and \$24,597/QALmonth (\$295,164/QALY) due to the smaller difference in QALmonths. With 75% bevacizumab cost reduction, the ICER is \$6,737/QALmonth (\$80,844/ QALY), which translates to \$23,580 for the 3.5 month (0.29 year) gain in OS.

Conclusions: Increased cost is primarily related to the cost of drug and not the management of bevacizumab-induced complications. Cost reductions in bevacizumab result in dramatic declines in the ICER, suggesting that cost reconciliation in advanced cervical cancer may be possible through the availability of biosimilars, and/or less expensive, equally efficacious anti-angiogenesis agents.

Erratum: In the transitions probability Table 2, the probability of going from "severe complications" to "progress" in one month is 0.9 (not 0), and the probability of going from "severe complications" to "die" is 0 (not 0.9), for both treatment options.

40. Yitong Wang (University Technology Sydney lecturer, i.e., asst. prof.), Liangyan Wang (Shanghai Jiao Tong University assoc. prof. and Merage PhD alumna), L. Robin Keller, "Discounting over Subjective Time: Subjective Time Perception Helps Explain Multiple Discounted Utility Anomalies," *International Journal of Research in Marketing*, 32 (2015), pp. 445-448, <http://dx.doi.org/10.1016/j.ijresmar.2015.08.006>. Final version published online: 30-NOV-2015. Accepted in August 2015.

Consumers often face choices involving intertemporal tradeoffs. Existing research suggests that decision makers in general do not obey discounted utility theory because their discount rates are context dependent. Recent literature incorporates decision makers' subjective perception of time into the classic discounted utility model and finds relatively constant discount rates over subjective time. In addition to replicating previous work, we investigated the missing component – the magnitude effect, provided a holistic view via a more comprehensive experiment including multiple anomalies, and found that subjective time perception was able to explain most of the anomalies simultaneously in a single scenario.

Prof. Shanghai Jiao Tong), L. Robin Keller, "Trust Antecedents, Trust and Online Microsourcing Adoption: An Empirical Study from the Resource Perspective," *Decision Support Systems*, 85 (May 2016) pp. 104-114, accepted March 2016. <http://www.sciencedirect.com/science/article/pii/S0167923616300288>.

The online microsourcing marketplace is a new form of outsourcing that is organized over online platforms for the performance of relatively small service tasks. Microsourcing offers a more flexible way to hire contract workers or to outsource. Prior research indicates the importance of individual-level trust when choosing providers in online sourcing marketplaces. We argue that institution-based trust is also crucial for online microsourcing adoptions. Drawing on a trust framework adapted from prior literature, this paper uncovers the trust-building mechanisms in online microsourcing marketplaces, as well as the marketplace-related attributes for online microsourcing adoption. The proposed research model is tested with a data set collected from the clients of a typical marketplace in China – zhubajie.com. The findings suggest that perceptions of resource-based attributes of a marketplace, together with the perceived effectiveness of its intermediary role, can help to build trust towards the marketplace, enhancing trust towards the community of providers and driving the intent to adopt online microsourcing. Thus, this paper confirms the roles of online marketplaces as both the resource pool and the transaction intermediary from the perspective of clients. Finally, this paper not only indicates the relevance of resource

theories in understanding this new trend in outsourcing, but also suggests the importance of trusted relational governance in governing online micro-sourcing transactions.

42. Liangyan Wang (Merage alumna and Associate Professor of Marketing, Antai Management School, Shanghai Jiao Tong University), Shijian Wang (just graduated student of marketing), L. Robin Keller, Jie Li (Assoc. Prof. of Market., Shanghai Jiao Tong Antai Mgt Sch.), "Thinking Styles Affect Reactions to Brand Crisis Apologies," *European Journal of Marketing*, 50(Issue 7/8), Sept. 2016, pp. 1263-1289. abstract: <http://www.emeraldinsight.com/doi/abs/10.1108/EJM-07-2014-0457>, accepted in March 2016.

Permanent link: <http://dx.doi.org/10.1108/EJM-07-2014-0457>.

Purpose – This article examines how a person's thinking style, specifically holistic versus analytic, and a firm's crisis apology with the remedial solution framed in "why" (vs. "how") terms can interactively impact consumers' perceived efficacy of the firm to respond to the crisis and their impression or evaluation of the brand.

Design/methodology/approach – Hypotheses were tested through three experimental studies involving 308 participants recruited in China. Participants answered survey questions investigating the interactive effects from consumers' thinking style (culture as a proxy in study 1, measured in study 2 or primed in study 3) and a brand's crisis apology with the remedial solution framed in "why" (vs. "how") terms on consumers' perceived efficacy and evaluation of the firm.

Findings – The frame of the remedial solution resulting in a higher evaluation improvement depended on a consumer's thinking style. For holistic thinkers, a "why" (vs. "how") framed remedial solution resulted in a higher evaluation improvement; however, for analytic thinkers, a "how" (vs. "why") framed remedial solution resulted in a higher evaluation improvement. Additionally, the results showed that a consumer's perceived efficacy of the brand being able to successfully respond to the crisis mediated the interactive effects of the remedial solution framing and thinking styles on the evaluation improvement.

Research limitations/implications – Different ways of framing the remedial solution in a firm's apology will have different impacts on people with different thinking styles. Participants in studies 2 and 3 were recruited from samples on campus in China. Additionally, the automobile brand used in this study is fictional to avoid prior brand name or brand commitment impact.

Practical implications – Our findings provide evidence that framing of the remedial solution can be leveraged as a tool to reduce negative impact resulting from a brand crisis. Specifically, our results suggest that companies may do well to employ a "why" framed remedial solution, particularly in cases where consumers are likely to process information holistically. Conversely, a "how" framed remedial solution may be effective in situations where consumers are likely to process information analytically.

Originality/value – This research contributes to the literature, being among the first to consider how the remedial solution framing in a firm's apology can enhance people's evaluation of the brand and decrease the perceived negative impact resulting from the brand crisis.

This research was funded by the National Natural Science Foundation of China Grant (71072059) and Shanghai Shuguang Program Grant (13SG16) to Liangyan Wang.

43. Jiaru Bai (Merage PhD student), Cristina del Campo (Universidad Complutense de Madrid and UCI visitor in 2016), L. Robin Keller, "Markov Chain Models in Practice: A Review of Low Cost Software Options," Publication in English, Spanish version also available: "Modelos de Cadenas de Markov en la Práctica: Una Revisión de Opciones de Software de Bajo Coste," *Investigación Operacional*, 2017, Volume 38 (Issue 1), pp. 56-62, accepted May 30, 2016. <http://rev-inv-ope.univ-paris1.fr/volumes-since-2000/volume-38-2017/>.

This paper was written in Spanish (and English) to facilitate communication with Spanish-speaking scholars in Cuba and elsewhere, who aim to conduct Markov cost effectiveness analyses and would benefit from low cost software alternatives. The working paper is in English and Spanish versions: [investigacion operacional 2016 06 28 Bai delCampo Keller English](#), [investigacion operacional 2016 Bai delCampo Keller](#)

Markov processes (or Markov chains) are used for modeling a phenomenon in which changes over time of a random variable comprise a sequence of values in the future, each of which depends only on the immediately preceding state, not on other past states. A Markov process (PM) is completely characterized by specifying the finite set S of possible states and the stationary probabilities (i.e. time-invariant) of transition between these states. The software most used in medical applications is produced by TreeAge, since it offers many advantages to the user. But, the cost of the TreeAge software is relatively high. Therefore in this article two software alternatives are presented: Sto Tree and the zero cost add-in program "markovchain"

implemented in R. An example of a cost-effectiveness analysis of two possible treatments for advanced cervical cancer, previously conducted with the Treeage software, is re-analyzed with these two low cost software packages.

Appeared online in early view prior to print: [Information Presentation in Decision and Risk Analysis: Answered, Partly Answered, and Unanswered Questions](#), Version of Record online: 21 SEP 2016 | DOI: 10.1111/risa.12697

[Abstract](#) [Article](#) [PDF\(120K\)](#) [References](#)

For the last thirty years, researchers in risk analysis, decision analysis, and economics have consistently proven that decision makers employ different processes for evaluating and combining anticipated and actual losses, gains, delays and surprises. While rational models generally prescribe a consistent response, people's heuristic processes will sometimes lead them to be inconsistent in the way they respond to information presented in theoretically equivalent ways. We point out several promising future research directions by listing and detailing a series of answered, partly answered, and unanswered questions.

45. Luping Sun, Xiaona Zheng, Meng Su, L. Robin Keller (2017), "Intention-Behavior Discrepancy of Foreign versus Domestic Brands in Emerging Markets: The Relevance of Consumer Prior Knowledge," *Journal of International Marketing*, published by the American Marketing Association, 25(1), pp. 91-109, accepted October 20, 2016. doi: <http://dx.doi.org/10.1509/jim.15.0123>.

Most research on the performance of foreign versus domestic brands in emerging markets examines measures of product evaluation or purchase intention. However, consumers intending to buy a product may switch to competing brands, displaying an intention-behavior discrepancy (IBD). Drawing upon literature on country associations and dual process theory, we examine the difference in IBD of foreign versus domestic brands in emerging markets and the moderating role of prior knowledge. We conducted an intention survey followed by a post-purchase survey in the Chinese automobile and smartphone industries. We found that foreign brands have an advantage on IBD relative to domestic brands, indicating that they have the dual advantage of higher evaluations and lower IBDs. Furthermore, foreign brands' advantage on IBD is smaller for consumers with inaccurate prior knowledge, as they are more likely to systematically reprocess information and discount foreign brands' favorable country associations. For these consumers, overestimating the product reduces foreign brands' advantage to a smaller degree than underestimating it due to confirmation bias. These findings provide implications for brands in emerging markets.

46. L. Robin Keller, Jay Simon (Merage PhD alumnus), January 2019, "Preference Functions for Spatial Risk Analysis", *Risk Analysis*, 39(1), pp. 244-256, in *Special Issue: Advances in Spatial Risk Analysis*, accepted 7-31-17, submitted 6-2016, Version of Record appeared online in early view prior to print: Sept. 7, 2017: [Abstract](#) [Article](#) [PDF\(1822K\)](#). In print in Volume 39, Issue1, <https://doi.org/10.1111/risa.12892>.

When outcomes are defined over a geographic region, measures of spatial risk regarding these outcomes can be more complex than traditional measures of risk. One of the main challenges is the need for a cardinal preference function that incorporates the spatial nature of the outcomes. We explore preference conditions that will yield the existence of spatial measurable value and utility functions, and discuss their application to spatial risk analysis. We also present a simple example on household freshwater usage across regions to demonstrate how such functions can be assessed and applied.

47. James Leonhardt (Merage PhD alumnus, at Univ. of Nevada, Reno), L. Robin Keller, Fall 2018, "Do Pictographs Affect Probability Comprehension and Risk Perception of Multiple-Risk Communications?" *Journal of Consumer Affairs*, 52(3), pp. 756-769, accepted 12-22-17, published in Early View on 4-6-2018, <http://dx.doi.org/10.1111/joca.12185>, [Leonhardt-Keller- JOCA-Final](#).

Pictographs can be used to visually present probabilistic information using a matrix of icons. Previous research on pictographs has focused on single rather than multiple-risk options. The present research conducts a behavioral experiment to assess the effect of pictographs on probability comprehension and risk perception for single and multiple-risk options. The creation of the experimental stimuli is informed by a review of the Centers for Disease Control and Prevention's vaccine information sheets. The results provide initial evidence that, in the context of childhood vaccines, the inclusion of pictographs alongside numeric (e.g. 1 in 5) probability information can result in higher probability comprehension and lower risk perception for multiple-risk options but not for single-risk options. These findings have implications for how health-related risks are communicated to the public.

Partially funded by a fellowship (Leonhardt) from the Newkirk Center for Science and Society and conducted under UCI Institutional Review Board's approved research protocol HS# 2009-7037.

Markov models allow medical prognosis to be modeled with health state transitions over time and are particularly useful for decisions regarding diseases where uncertain events and outcomes may occur. To provide sufficient detail for operations researchers to carry out a Markov analysis, we present a detailed example of a Markov model with five health states with monthly transitions with stationary transition probabilities between states to model the cost and effectiveness of two treatments for advanced cervical cancer. A different approach uses survival curves to directly model the fraction of patients in each state at each time period without the Markov property. We use this alternative method to analyze the cervical cancer case and compare the Markov and non-Markov approaches. These models provide useful insights about both the effectiveness of treatments and the associated costs for healthcare decision makers.

Winner of the 2020 Clemen-Kleinmuntz Decision Analysis Best Paper Award, formerly called the Decision Analysis Special Recognition Award. This award, with a \$2000 prize, is given annually for the paper most worthy of recognition published in the Decision Analysis journal (published by INFORMS) for that year.

Policymakers often make decisions involving human mortality risks and monetary outcomes that span across different time periods and horizons. Many projects or environmental regulation policies involving risks to life, such as toxic exposures, are experienced over time. The preferences of individuals on lives lost or saved over time should be understood to implement effective policies. Using a within-subject survey design, we investigated our participants’ elicited preferences (in the form of ratings) for sequences of lives saved or lost over time at the participant level. The design of our study allowed us to directly observe the possible preference patterns of Negative Time Discounting or a Preference for Spreading from the responses. Additionally, we embedded factors associated with three other prevalent anomalies of intertemporal choice (Gain/Loss Asymmetry, Short/Long Asymmetry, and the Absolute Magnitude Effect) into our study for control. We find that our participants exhibit three of the anomalies: Preference for Spreading, Absolute Magnitude Effect and Short/Long Term Asymmetry. Furthermore, fitting the data collected, Loewenstein and Prelec’s model for the valuation of sequences of outcomes allowed for a more thorough understanding of the factors influencing the individual participants’ preferences. Based on the results, the standard discounting model does not accurately reflect the value that some people place on sequences of mortality outcomes. *Preferences for uniform sequences should be considered in policymaking, rather than applying the standard discounting model.*

Finalist for the 2020 Decision Analysis Special Recognition Award.

Altruistic preferences, or the desire to improve the well-being of others even at one’s own expense, can be difficult to incorporate into traditional value and utility models. It is straightforward to construct a multi-attribute preference structure for one decision maker that includes the outcomes experienced by others. However, when multiple individuals incorporate one another’s well-being into their decision making, this creates complex interdependencies that must be resolved before the preference models can be applied. We provide representation theorems for additive altruistic value functions for two-person, n-person, and group outcomes in which multiple individuals are altruistic. We find that in most cases it is possible to resolve the preference interdependencies and that modeling the preferences of altruistic individuals and groups is tractable.

Press coverage of paper

<https://merage.uci.edu/news/2021/04/A-Pictograph-Is-Worth-A-Thousand-Words-Communicating-Health-Risks-for-Medications-and-Vaccines.html>

Health risks, such as the probability of experiencing a side effect from a medication, are typically communicated numerically. However, presenting risks in strictly numeric formats is problematic considering that the public often experiences difficulty in comprehending strictly numeric probabilities. To help overcome this problem, Leonhardt and Keller (2018) tested the efficacy of using pictographs to visually present probabilistic information to health consumers. They found that the addition of pictographs alongside numeric probability information increased probability comprehension and lessened the perceived risk of a multiple risk health option. Here, we review relevant work on probability format and build on general evaluability theory to posit why pictographs may result in lower risk perceptions of multiple risk options. We discuss current limitations in our understanding of how the public perceives multiple risk options, and we highlight opportunities for future research. For instance, we introduce Quick Response (QR) codes as a potential tool to help consumers view health risks in multiple formats on the Internet.

52. Alexander Robinson (Merage PhD, CSX), L. Robin Keller, Cristina del Campo (Complutense University of Madrid, former Merage visitor), “Building Insights on True Positives vs. False Positives: Bayes’ Rule”, forthcoming, [Decision Sciences Journal of Innovative Education](#), accepted 2-27-2022, in special issue on Teaching Data Analytics and Statistics, <https://onlinelibrary.wiley.com/toc/15404609/0/0>

Covid-19 pandemic policies requiring disease testing provide a rich context to build insights on true positives vs false positives. Our main contribution to the pedagogy of data analytics and statistics is to propose a method for teaching updating of probabilities using Bayes’ Rule reasoning to build understanding that true positives and false positives depend on the prior probability. Our instructional approach has three parts. First, we show how to construct and interpret raw frequency data tables, instead of using probabilities. Then, we use dynamic visual displays to develop insights and help overcome calculation avoidance or errors. For greater insights, we look at graphs of positive predictive values and negative predictive values for different priors. The learning activities we use include lectures, in-class discussions and exercises, breakout group problem solving sessions, and homework.

Beyond learning to update the probability of having the disease given a positive test result, material can cover naive estimates of the positive predictive value, the common mistake of ignoring the disease’s base rate, debating the relative harm from a false positive versus a false negative, and creating a new disease test.

Robin Keller, Jay Simon (Merage alumnus and Associate Professor, American University), “When Are We Willing to Wait? Prescriptive Challenges in Evaluating Intertemporal Outcomes”, December 2021, rev. March 2022, submitted as a proposed chapter in the forthcoming book edited by Matthias Seifert, Florian Federspiel and Gilberto Montibeller, *Behavioral Decision Analysis*, for the *Springer International Series in Operations Research and Management Science*.

The classic normative model for intertemporal preferences uses a constant discount rate, but behavioral experiments have shown that people do not tend to make choices consistent with a constant discount rate. We first present normative models for time preferences, then discuss descriptive results for choices between single outcomes occurring at different times. People often have different implicit discount rates for different types of scenarios, and several anomalies arise consistently. We contrast those results with findings for preferences for sequences of multiple outcomes over time. People tend to prefer increasing or constant sequences of outcomes over time, especially when the outcomes are non-monetary in nature. This suggests a willingness to wait for improvement, but not in the way that classical discounting would prescribe. We end with prescriptive nudges to improve dynamic consistency and pose questions still to be resolved about how decisions involving outcomes over time can be improved prescriptively.

Abstracts

Liangyan Wang, Qin Wang, L. Robin Keller, and Eugene Chan (2017), "Counterfeits Can Benefit Original Brands When People Are Caught Using Counterfeits: the Role of Face Restoration", in NA (North American) - Advances in Consumer Research Volume 45, eds. Ayelet Gneezy, Vladas Griskevicius, and Patti Williams, Duluth, MN : Association for Consumer Research, pp. 948-950. <http://www.acrwebsite.org/volumes/1023927/volumes/v45/NA-45>

We examine consumers' preference and purchase intentions for genuine products after they are caught using counterfeit versions. We show that consumers with an interdependent self-construal increase their preference for genuine products when caught using counterfeit symbolic (vs. functional) products because they wish to restore face.

Media Interviews & Contributions

One of 10 women interviewed and spotlighted for longtime contributions to operations research: Kara Tucker, "Powerful, pragmatic pioneers: Personal profiles of 10 pillars of the O.R. profession who blazed trails, broke barriers and busted down doors for others to follow (plus one 'Rising Star')", [OR/MS Today](#), 46(1) February 2019, <https://pubsonline.informs.org/doi/10.1287/orms.2019.01.14/full/>. Magazine editorial (<https://pubsonline.informs.org/doi/10.1287/orms.2019.01.10/full/>) explains selection process; more than 30 candidates were first considered and 10 were selected ([Peter Horner](#), "Pioneer Women of O.R.").

L. Robin Keller and Craig W. Kirkwood, "The Decision to Form INFORMS", Invited Column for [OR/MS Today](#), February 2020, Volume 47, number 1

We were chief financial officers for The Institute of Management Sciences (TIMS) and the Operations Research Society of America (ORSA), respectively, during portions of the period leading up to the merger to form INFORMS, and we were actively involved in analyses to support decision making about the potential merger. Keller and Kirkwood (1999) provides a definitive record of those analyses, and we will provide a few additional thoughts looking back from 2020.

Merage School Mentioned:

"It used to be that a theme park operator would pair an engineer with a business expert to improve queuing at rides and attractions, notes Robin Keller, a professor of operations and decision technologies at the University of California—Irvine's Paul Merage School of Business. Today, that task is handled by a single person trained in operations research."

Peter Horner, "Back to the future: Interview with incoming INFORMS President Robin Keller on the past, present and future of INFORMS and its embrace of analytics," [OR/MS Today Magazine](#). <https://www.informs.org/ORMS-Today/Public-Articles/December-Volume-41-Number-6/Q-A-Back-to-the-future>. 12/2014

Martin Wisckol, "CALIFORNIA POWERBALL SLOGAN ATTRACTS CRITICS," [Orange County Register](#), <http://www.ocregister.com/articles/lottery-505543-slogan-believe.html> . 4/29/2013

Interviewed/quoted:

"... But a billboard for Powerball, ...: "Believe in something bigger." We know the jackpot is a fantasy. The odds against winning are 175,223,510 to 1. But the state's Lottery Commission is asking us to believe the fantasy, a point made even clearer in a Powerball radio ad... Robin Keller, a UC Irvine business professor who researches perceived risk in decision making, was prompted to explain construal theory. "Anything that seems psychologically distant, you'll deal with in a more logical way," she said. "Anything that seems psychologically close, you'll deal with in a more emotional way." And the slogan, "Believe in something bigger"? "This seems like they're trying to make it more emotional," she said."

Robin Keller and Craig Kirkwood (ASU), "Survey of Key Stakeholder Evaluation Concerns and Tradeoffs for Central Arizona Water Resource Planning: Methods and Results," Technical Report, July 5, 2007, <http://faculty.sites.uci.edu/lrkeller/files/2013/08/Keller-204.pdf>. Decision Center for a Desert City, Global Institute of Sustainability, Arizona State University, P.O. Box 878209, Tempe, AZ 85287-8209.

This technical report contains a summary of the methods and a compendium of survey responses and analysis results for a web-based survey of Central Arizona water experts that addressed water planning factors and important forthcoming water management decisions and policy recommendations. The experts were asked for their priorities among approximately thirty specific concerns within the seven categories of: Central Arizona socio-economic impacts, financial and technical requirements, health and safety, impacts on the natural/biophysical environment, indirect/external impacts, political impacts & governance, and sufficiency of water supplies. Responses were obtained from experts in policy, planning, engineering, hydrology, and other fields within governmental, private sector, and interest group organizations. The results show areas of agreement and disagreement among stakeholders, as well as some priorities that may have implications for the role of the Decision Center for a Desert City.

<https://merage.uci.edu/news/2018/04/new-books-from-professor-keller-and-dean-spangenberg.html>

“TRB Special Report 324: Designing Safety Regulations for High-Hazard Industries, examines key factors relevant to government safety regulators when choosing among regulatory design types, particularly for preventing low-frequency, high consequence events. In such contexts, safety regulations are often scrutinized after an incident, but their effectiveness can be inherently difficult to assess when their main purpose is to reduce catastrophic failures that are rare to begin with. Nevertheless, regulators of high-hazard industries must have reasoned basis for making their regulatory design choices.

Asked to compare the advantages and disadvantages of so-called “prescriptive” and “performance-based” regulatory designs, the study committee explains how these labels are often used in an inconsistent and misleading manner that can obfuscate regulatory choices and hinder the ability of regulators to justify their choices. The report focuses instead on whether a regulation requires the use of a means or the attainment of some ends—and whether it targets individual components of a larger problem (micro-level) or directs attention to that larger problem itself (macro-level). On the basis of these salient features of any regulation, four main types of regulatory design are identified, and the rationale for and challenges associated with each are examined under different high-hazard applications.

Informed by academic research and by insights from case studies of the regulatory regimes of four countries governing two high-hazard industries, the report concludes that too much emphasis is placed on simplistic lists of generic advantages and disadvantages of regulatory design types. The report explains how a safety regulator will want to choose a regulatory design, or combination of designs, suited to the nature of the problem, characteristics of the regulated industry, and the regulator’s own capacity to promote and enforce compliance. This explanation, along with the regulatory design concepts offered in this report, is intended to help regulators of high-hazard industries make better informed and articulated regulatory design choices.”

Research Projects

Cristina del Campo (Complutense University of Madrid), Jiaru Bai (Merage PhD alumna, Wake Forest University), L. Robin Keller, “Modeling Cost-effectiveness Analysis of Treatment Sequencing”, latest version January 2022.

In clinical practice, patients with cancer often undergo treatment with a sequence of drugs, usually because of diminishing effectiveness over time or resistance development. However very few cost-effectiveness analyses have included that fact in their model. This paper aims at closing that gap by presenting a model that reflects the possibility of the patient switching from one therapeutic agent to another one throughout the long-term duration of his/her life.

Liangyan Wang (Merage PhD alumna and Associate Prof. Shanghai Jiao Tong), Qin Wang (graduate student, Shanghai Jiao Tong, PhD student as of Fall 2016 at ASU, qin.wang.5@asu.edu), Eugene Y. Chan (Monash University, Melbourne), L. Robin Keller, “Caught in the Act: Being Caught with Counterfeit Versions Increases Preference for Genuine Products,” latest version February 2022.

Despite the regulatory and legal actions taken, the market for counterfeit products continues to grow. But in today’s technologically-advanced and heavily-scrutinized society, any decision to buy and wear counterfeit goods also means a high risk of being caught. What are the impacts on genuine products of consumers being caught wearing counterfeit goods? We posit that there is a difference depending on consumers’ self-construal. We hypothesize that interdependent consumers caught with counterfeit goods are more likely to feel embarrassed, motivating them to purchase the “real thing” as a means to save face, compared to their independent counterparts. Findings from two studies provide support for this prediction. In addition, the effect is moderated by the product type—it is greater for symbolic than functional goods, offering more evidence that interdependent consumers’ drive to save face is the underlying mechanism because symbolic products have more social functions than functional products. Our work provides unique insights into how to discourage the purchase of counterfeit goods and into the predictions for how sales of genuine products might rise in interdependent societies in which the counterfeit market continues to grow despite efforts to shrink it.

Amy Williams (Merage PhD student) and L. Robin Keller (with Shuya Yin), “Environmentally conscious consumers and retail return behavior”, February 2022.

Product returns plague retailers and customers alike for the added logistical, monetary, and environmental cost. This research examines the latter piece: customer return behavior by their environmental consciousness. Product returns incur an environmental cost, whether that be with carbon emissions from delivery vehicles, consuming more packaging to resell, or waste if the product ends up in landfill. Consequently, consumers who are environmentally conscious should care about their penchant for returns. We conducted a study to examine the relationship between consumers’ environmental consciousness and their return behavior.

L. Robin Keller, Jay Simon (Merage Ph.D. alumnus, Kogod School of Business, American University), “Key Points for Communicating Clearly About Risk in Business”, targeted for a professional business journal, latest version Dec. 2020, first version 6-2-2020.

There are many definitions of risk. When risk communications in an organization are not specific and deliberate, stakeholders will not all share a common understanding of the risk being faced, and decision quality will suffer. This paper explores the components of risk, the challenges of communicating them, and guidance on how to overcome those challenges.

Ali Esmaceli (ODT PhD student), L. Robin Keller, “Geographically weighted multi-attribute modeling of quality of service for Uber autonomous car assignments”, 2019.

In this paper we present a model for maximizing quality of service for Uber autonomous car assignments. The model allows the company to differentiate between different regions of a map and to use different parameters of quality of service. We suggest methods for finding weights for attributes and regions and for finding attribute value functions. We also present a heuristic algorithm for finding the best car assignment based on the model in an efficient time.

Juliet Wolford, MD, Jiaru Bai, Ramez Eskander, MD, Robin Keller, Lindsey E. Minion, MD, Gareth K. Forde, MD, PhD, MBA, John K. Chan, MD, Bradley J. Monk, MD, Krishnansu S. Tewari, MD, “A Markov Model To Evaluate Cost-Effectiveness of Parp Inhibitor Olaparib For Fourth Line Treatment Of Recurrent Ovarian Cancer,” 2015, updated 2017.

Objective: Evaluate cost-effectiveness of the recently approved, PARP inhibitor, olaparib, in the setting as it is approved, 4th line therapy for women with BRCA-deficient ovarian carcinoma. Since olaparib is an oral preparation, and therefore Medicare is not authorized to pay for the drug; we hypothesize that the assumed cost prohibitive oral olaparib will be balanced to the cost of the frequently used more toxic, chemotherapeutic agents when factoring in the infusion costs, pretreatment costs, and toxicity costs.

Methods: Overall costs were calculated for each drug regimen employing toxicity costs, individual drug cost, pretreatment costs and infusion costs. Therapies were divided into groups: olaparib, non-platinum agents, chemotherapy with bevacizumab, and platinum regimens. A Markov model was created using Data 4.0 (TreeAge Pro 2014) and showed patients transitioning through response, hematological complications, non-hematological complications, fifth line and onward, and death. Ovarian cancer survivability is measured in months rather than years; therefore results were reported in quality adjusted ovarian cancer life months (QALmonth), adjusted from a baseline of having advanced ovarian cancer during a month. Utilizing data extracted from the associated registration trials, complications costs were compiled using the Medicare data for 2015 to determine the overall costs of treatment and associated complications.

Results: In the model we created, the platinum group dominated, with olaparib exhibiting an estimated cost approximately 5.3 times more than the platinum therapy group, adding \$81,108 prior to progression. In comparing the cost-effectiveness calculated from the model utilizing the average PFS for each group, the platinum group proved to be most cost-effective at \$1,672, next was the non-platinum group at \$6,688, olaparib at \$10,291, and lastly the bevacizumab group at \$12,482. The only positive incremental cost-effectiveness ratio [ICER] was of the nonplatinum group with an ICER of \$35,567, which shows a \$35,567 increase in cost over the 1.2 months progression free survival [PFS] with olaparib therapy. The last two regimens, platinum and bevacizumab have negative ICERs of -\$54,435 and -\$56,091, respectively, representing the increased progression free survival [PFS] yet low cost of platinum therapy to olaparib and the high cost of bevacizumab and decreased PFS to olaparib.

Conclusion: The primary expense of olaparib lies in the high cost of the drug, rather than the complications associated with its use. Reconciliation of incremental clinical benefits with exponentially rising costs remains problematic. Even minimal reductions in olaparib will prove to be beneficial to the cost-effectiveness and will allow access to an effective medication that is better tolerated and easier to administer.

Jay Simon and L. Robin Keller, “Modeling Decisions with Multiple Health Conditions with Reference-Dependent Multi-Attribute Expected Utility,” working paper, 6/2009.

Medical and other health-related decisions often do not incorporate all of the available information, and may not adequately address the preferences of the decision maker. These decisions involve some interesting theoretical and modeling issues when analyzed using multi-attribute utility. They arise frequently in the medical domain, but also in regard to personal lifestyle choices. It is possible to formulate a reasonably straightforward expected utility model, provided that we impose some conditions on the preferences of the decision maker. These conditions help determine the types of contexts for which the model will be valid. We then extend the initial work to a novel reference-dependent expected utility model, which captures the notion of adaptation, and thus gives a better approximation of the level of utility actually experienced by the decision maker. This work is supported by a doctoral dissertation grant from the National Science Foundation in Decision, Risk and Management Science (Award # 0823458).

Tianjun Feng and L. Robin Keller, “Modeling the Effects of Reference Point Dependence on Supplier Selection and Competition.” Working paper, August 2008.

We introduce a buyer's value functions in both a standard non-reference dependent model and a reference point dependent model to study the buyer's supplier choices over two time periods on a two-attribute space, over price and delivery time guarantee. Homogeneous buyers are considered in a service market. We provide an analysis to show that early entrants can attain a first mover advantage due to the effects of reference point dependence and loss aversion. In addition, we analytically show that buyers may have asymmetric responses to price promotions of the suppliers (i.e., asymmetric patterns of price competition) if buyers are more loss averse on delivery time guarantee than they are on price. We also provide an analysis for asymmetric patterns of competition on delivery time guarantee if buyers have higher loss aversion on price. Some managerial insights are discussed for a competitive service market based on our model analysis.

PRESENTATIONS AT SCIENTIFIC MEETINGS, UNIVERSITIES, AND COMMUNITY GROUPS

1105. L. Robin Keller, invited session chair for INFORMS Annual Meeting, Indianapolis, on behavioral decision analysis papers. October 16-19, 2022. Co-chaired with Qi Yan.

1104. L. Robin Keller, Session chair and Panelist for Peter Fishburn Memorial Panel session, held in person with some pre-recorded talks, INFORMS Annual Meeting, Anaheim, Oct. 24-27, 2021.

1103. Qi Yan (live presenter), L. Robin Keller, "Inviting Celebrities to Live Commerce: More Sales or More Returns?", INFORMS Annual Meeting, Anaheim, Oct. 24-27, 2021.

Live commerce, a new popular way of shopping, is a combination of e-commerce and live streaming. Professional sellers introduce and make sales of products during live streaming. Sometimes, they invite celebrities to join the live video stream because of various reasons. Fans of the celebrities will follow the stream and make purchases in real time to validate their popularity. The large flow to the streaming channel helps the streamer become more acknowledged. However, more returns may occur after the event because of the cancellations of transactions from the fans. The net effect of inviting celebrities joining live commerce and how fit they are to the products need to be examined.

1102. Candice Huynh (presenter, Merage Ph.D. alumna, California State Polytechnic University-Pomona), Jeffery Guyse (Merage Ph.D. alumna, Cal Poly Pomona), L. Robin Keller, "Lives Saved vs. Lives Lost in Survey Research: Investigating Methodological Consistency", Northeast Decision Sciences Institute 50th Annual Conference 2021, held virtually, March 26-27, 2021. <https://nedsi2021.exordo.com/programme/presentation/230>

Seven different elicitation procedures are employed in a between-subjects experiment over hypothetical scenarios involving lives either being saved or lost over time. Inspired by a study by Frederick (2003) which included lives being saved in 6 of the 7 procedures (choice, matching, total, sequence, equity, & context) and lives lost in just one of the cases (rating), we incorporate a completely balanced and symmetrical design with both lives saved and lives lost for all 7 methodologies. The effect on saved and lost asymmetry along with the contextual effect of the questionnaire design itself are analyzed.

1101. L. Robin Keller, Panelist (as Ramsey Medalist), "DAS at 40: Legends among us", INFORMS Annual Meeting (Virtual), Nov. 9, 2020.

This year marks the 40th Anniversary of the Decision Analysis Society. Much has been accomplished in these years and even more remains in front of us. How best to guide the future of Decision Analysis if not through the words of its legends? Join us to discuss the future of DAS with Ramsey medalists David Bell, Bob Clemen, Jim Dyer, Simon French, Raimo Hämmäläinen, Ralph Keeney, L. Robin Keller, Don Kleinmuntz, D. Warner North, Gregory Parnell, Elisabeth Paté-Cornell, Rakesh Sarin, James Smith, Carl Spetzler, Detlof von Winterfeldt and Robert Winkler.

1100. L. Robin Keller (presenter), Jay Simon, "Key points for communicating clearly about risk", INFORMS Annual Meeting (Virtual), flash talk, Nov. 12, 2020.

It is important to be clear so others know what you mean when you say something is risky (e.g., a specific adverse outcome such as a financial loss or pandemic vs. a gamble with probabilities of different possible outcomes). Know also what would increase the riskiness (e.g., more risky if outcomes in a gamble shift downward or are multiplied by a number larger than one) and what would mitigate the riskiness (e.g., hedging or designing new action alternatives). Finally, it is important to understand what is meant by risk aversion.

1099. Qi Yan (presenter), Cristina del Campo, L. Robin Keller, "Tip Or Not Tip? A Study of Viewer's Willingness To Tip Under The Influences of Income, Lottery Incentives, Winning Probability And Streamer Contract", INFORMS Annual Meeting (Virtual), flash talk, Nov. 12, 2020.

Online streaming brings in huge profits to the platforms with majority comes from the tips given by the viewers. We study whether the split of tips between streamer and platform affects viewers' willingness to tip, under the influences of income, incentives, and winning probability. We conducted an online survey that the participants were randomly assigned one version of the questions. The *Split* version, assuming that the platform splits the tips with the streamer with an unknown exact ratio, has 403 responses. The *All* version, assuming that the platform takes no tips and the streamers get all, has 508 entries. We conducted hypothesis testing over different scenarios and find significant differences.

1098. (Delayed due to COVID) L. Robin Keller, **Invited Keynote Speaker**, “Building Insights by Modeling Stakeholders’ Multiple Objectives”, **International Federation of Operations Research Societies (IFORS) conference, Seoul, Korea, June 21-26, 2020. (Held Aug. 22-27, 2021 as a virtual conference, Keynote talk pre-recorded and delivered California time Aug. 23, followed with live question session.)**

Including multiple objectives in decision models can provide greater insights for decision makers. Examining the perspectives of multiple stakeholders builds understanding and can help to creatively design new alternative actions to resolve conflicts.

Constructing a hierarchy of each stakeholder’s objectives with respect to a decision situation can provide insights on areas of agreement and disagreement. Sometimes, one objectives hierarchy is suitable for a set of stakeholders, and differences in opinions can be characterized by differences in a stakeholder’s tradeoff weights between the objectives. Examples include planning for protection against radioactive iodine releases in nuclear incidents and analysis for the founding of INFORMS.

In other cases, a separate objectives hierarchy will be constructed for each stakeholder because their objectives are so different that construction of separate hierarchies better represents their divergent perspectives. Examples include a tuna fish supplier source selection decision, a prostate cancer treatment decision, and a building supply store facility location. Having modeled stakeholders’ objectives and the performance of possible actions on their objectives, model results can show how much agreement there is among stakeholders on each possible action. Dynamic sensitivity analysis can be conducted using Excel sliders on the objectives’ weights, to rapidly see how the preferred action may change with weight changes.

Sometimes each stakeholder’s model will be combined into one overall model to determine one overall value score for an alternative action, either by weighting each stakeholder equally, or applying different weights to different stakeholders. In spatial decisions involving socio-economic and environmental outcomes, such as household freshwater planning, each subregion can be seen as a stakeholder to the overall decision and could be given a weight in the overall value calculation.

1097. **Moderator for Jay Simon 12-18-19 public webinar for the Society for Decision Professionals and the Decision Analysis Society of INFORMS on our joint work in Operations Research and Risk Analysis on “Modeling Geographic Preferences for Policy Decisions”.** Merage alumnus Jay Simon was the speaker presenting the slides and I took questions from the audience submitted online and relayed them to Jay, with some added comments from me.

1096. L. Robin Keller, invited panelist on “**Future of Decision Analysis and Multi-criteria Decision Making in the Age of Big Data, AI, and Social Media**” with Rakesh Sarin and Greg Parnell, **Hawaii International Conference on System Sciences (HICSS) Maui Conference, Jan. 7-10, 2020.**

The fourth industrial revolution appears to be Big Data, Data Science, and Analytics. Big data has resulted from the desire of individuals for anytime access to news and entertainment and for continual connection through social media; business’s desire to understand and influence the buying habits of current and potential customers; and the government’s desire to provide better services. In addition, automation and Artificial Intelligence are now embedded in almost all manufactured product (e.g., automobiles) and service delivery (e.g. natural language). To meet the demand of employers and the interests of students, universities are rushing to develop Data Science and/or Analytics undergraduate and professional degrees. One popular analytics categorization includes descriptive analytics (what data can inform us about the past), predictive analytics (what data can help us predict the future needs or behaviors), and prescriptive analytics (how our preferences and inform our decision-making). The purpose of this panel is to explore how decision analysis and multi-criteria decision-making can play an important role in data science and analytics.

1095. Jeffery L. Guyse (Presenter, Merage alumnus, Cal Poly Pomona), Candice Huynh (Merage alumna, Cal Poly Pomona), L Robin Keller, “**Lives Saved vs. Lives Lost in Survey Research: Investigating Methodological Consistency**”, **accepted talk, Annual Conference of Decision Sciences Institute, November 23 – 25, 2019.**

Seven different elicitation procedures are employed in a between-subjects experiment over hypothetical scenarios involving lives either being saved or lost over time. The effect on the responses due to the outcome being saved or lost and the contextual effect of the questionnaire design itself are analyzed for the elicitation methods.

1094. Jiaru Bai (speaker), Cristina del Campo, L. Robin Keller, “**Challenges in Modelling Time Dependent Transitions in Cost-effectiveness Analysis**” in invited session co-chaired by Keller and del Campo on “**Healthcare Decision Analysis**”, **INFORMS Annual Meeting, Seattle, WA, Oct. 20-23, 2019.**

We propose challenges in estimating Markov model parameters with limited clinical data. With limited data from registration trials, we developed a way to estimate time-dependent transition probabilities in a Markov model for cancer progression. The method is applied to cervical cancer data in a clinical study.

1093. Alexander Robinson (speaker), Cristina del Campo, L. Robin Keller, “Enhancing Understanding of Probability Updating with Bayes' Rule” in invited session co-chaired by Keller and del Campo on “Healthcare Decision Analysis”, INFORMS Annual Meeting, Seattle, WA, Oct. 20-23, 2019.

The process of calculating updated probabilities via Bayes' theorem and interpreting them should be improved to avoid errors and enhance understanding. Updating probabilities given new evidence is a technique that has applications in a number of fields, in particular healthcare. Stating probabilities as numbers of people out of a total number will help health care providers, care givers and patients better understand and retain the information.

1092. L. Robin Keller, Ramsey Medalist Panel Chair and Panelist, Advances in Decision Analysis conference at Bocconi University, Milan, Italy, June 19-21, 2019, sponsored by the Decision Analysis Society of INFORMS.

1091. L. Robin Keller, panelist and mentor at Women in Economics and Business Workshop, April 26, 2019, UC Irvine, organized by graduate students.

1090. L. Robin Keller, “Spatial Preference Models with Multiple Objectives across Multiple Geographic Regions”, Institute for Mathematical Behavioral Science, UCI, invited colloquium speaker, Dec. 6, 2018.

This talk presents decision analysis methodology for decisions based on data from geographic information systems. The consequences of a decision alternative are modeled as distributions of outcomes across a geographic region. We discuss conditions that may conform with the decision maker's preferences over a specified set of alternatives; then we present specific forms for value or utility functions that are implied by these conditions. Decisions in which there is certainty about the consequences resulting from each alternative are considered first; then probabilistic uncertainty about the consequences is included as an extension. Two hypothetical urban planning decisions are modeled: one on water use and temperature reduction in regional urban development and one on fire coverage across a city.

One of the remaining challenges is the need for a cardinal preference function that incorporates the spatial nature of the outcomes. We explore preference conditions that will yield the existence of spatial measurable value and utility functions. Such measurable preference functions allow simpler assessment procedures and a strength of preference interpretation of the results. We present a simple example on household freshwater usage across regions.

1089. Jeffery L. Guyse (Presenter, Merage alumnus, Cal Poly Pomona), L Robin Keller, Candice Huynh (Merage alumna, Cal Poly Pomona), “Valuing Sequences of Lives Lost or Saved Over Time: Preference for Uniform Sequences”, invited talk in session on Behavioral Decision Analysis with Mortality and Health Outcomes, co-chaired by Keller and Guyse, INFORMS Annual Meeting, Phoenix, Nov. 2018.

We present our within-subject survey using subjective ratings for sequences of lives lost or saved over time, with factors embedded for anomalies. The prediction results for the standard discounting model (SDM) are analyzed. A model by Loewenstein & Prelec (L&P) for valuation of sequences was then fit to the survey data and compared to the best fits of the SDM. In all cases, the L&P model performed better than the SDM at predicting the individual normalized ratings for these sequences. We conclude that preferences for uniform sequences should be considered in policy making, rather than presuming people have a preference for declining sequences of mortality outcomes.

1088. Jeffery L. Guyse, Candice Huynh (presenter), L Robin Keller, “Lives Saved vs. Lives Lost in Survey Research: Investigating Methodological Consistency”, invited talk in session on Behavioral Decision Analysis with Mortality and Health Outcomes, co-chaired by Keller and Guyse, INFORMS Annual Meeting, Phoenix, Nov. 2018.

Seven different elicitation procedures are employed in a between-subjects experiment over hypothetical scenarios involving lives either being saved or lost over time. Inspired by a study by Frederick (2003) which included lives being saved in 6 of the 7 procedures (choice, matching, total, sequence, equity, & context) and lives lost in just one of the cases (rating), we incorporate a completely balanced and symmetrical design with both lives saved and lives lost for all 7 methodologies. The effect on the survey responses due to the outcome being saved or lost along with the contextual effect of the questionnaire design itself are both analyzed for each of the 7 elicitation procedures employed.

1082. Liangyan Wang (presenter), Qin Wang, L. Robin Keller, and Eugene Chan, "Counterfeits Can Benefit Original Brands When People Are Caught Using Counterfeits: the Role of Face Restoration", Advances in Consumer Research conference, Oct. 2017, San Diego.

We examine consumers’ preference and purchase intentions for genuine products after they are caught using counterfeit versions. We show that consumers with an interdependent self-construal increase their preference for genuine products when caught using counterfeit symbolic (vs. functional) products because they wish to restore face.

1081. Juliet Elizabeth Wolford (Poster presenter), Jiaru Bai, Ramez Hasef Eskander, L. Robin Keller, Lindsey E Minion, John K. Chan, Bradley J. Monk, Krishnansu Sujata Tewari, “Evaluating the cost-effectiveness of current FDA-approved PARP inhibitors for the treatment of recurrent ovarian cancer”, American Society of Clinical Oncology (ASCO) conference, June 3, 2017, Chicago, Poster abstract published in *J Clin Oncol* 35, 2017 (suppl; abstr 5516), http://abstracts.asco.org/199/AbstView_199_193762.html

Background: Unlike approved IV administered therapies, Medicare is under no obligation to cover prescription medicines. We sought to evaluate the cost-effectiveness of the two FDA-approved orally administered PARP inhibitors (PARPi), olaparib and rucaparib. **Methods:** A Markov model was created in TreeAge Pro 2015 with nodes in the chain allowing patients to transition through response, hematological complications, non-hematological complications, progression, and death. Separately, the PARP inhibitors were compared with IV administered drugs approved for recurrent ovarian cancers including platinum-based, non-platinum, and bevacizumab-based regimens. Toxicity and mean PFS rates for the different agents were obtained from registration trial data. Costs of IV chemotherapy, managing toxicities, infusions, and supportive care were estimated using 2015 Medicare data. Incremental cost-effectiveness ratios (ICER) were calculated and survival was reported in quality adjusted life months. **Results:** Platinum-based combinations were the most cost-effective at \$1,672/PFS mo as compared to non-platinum agents (\$6,688/mo), bevacizumab-containing regimens (\$12,482/mo), olaparib (\$13,3731/mo), and rucaparib (\$14,034/mo). Considering a cost of \$114,478 for olaparib and \$137,068 for rucaparib prior to progression, costs associated with PARPi were 7.1 to 8.3X more than platinum combinations. To better compare the registration trial data to PARPi data, probability was adjusted to 2nd line for rucaparib, revealing it’s ICERs’ of per month of life added to be \$26,997 for bevacizumab, \$17,757 for non-platinum, and \$79,585 for platinum. Using the adjusted-to-2nd-line probabilities for olaparib, exhibited ICERs were \$16,549 for bevacizumab, \$25,637 for non-platinums and \$72,083 for platinum. **Conclusions:** The high costs of PARPi were not balanced by costs of infusion and managing toxicities of IV drugs typically associated with lower response rates and shorter PFS in the recurrent space. Balancing incremental clinical benefit with novel therapies remains problematic and could widen disparities among those with limited access to care.

1080. Jiaru Bai (presenter and session chair), Cristina Del Campo and L. Robin Keller, “Challenges In Markov Modeling of Cancer Treatment,” invited talk in cluster on Computational Decision Analysis under cluster chair Jay Simon, INFORMS Computing Society ICS2017 conference, January 2017, Austin, Texas.

We present a way to build a Markov decision tree to model cancer progression and cost-effectiveness analysis for two or more cancer treatments. We propose several problems researchers can encounter in this kind of research and provide possible solutions.

1079. Jay Simon (presenter), L. Robin Keller, “Spatial Preference Functions for Risk Analysis,” invited talk in Spatial Multicriteria Analysis session, INFORMS Annual Meeting, Nashville, Nov. 2016.

When outcomes are defined over a geographic region, measures of spatial risk regarding these outcomes can be more complex than traditional measures of risk. One of the main challenges is the need for a cardinal preference function that incorporates the spatial nature of the outcomes. We explore preference conditions that will yield the existence of spatial measurable value and utility functions, and discuss their application to spatial risk analysis.

1078. L. Robin Keller, Invited Panelist on “Advice from Award Winning Researchers” in Decision Analysis Society Cluster, joint with Junior Faculty Interest Group, INFORMS Annual Meeting, Nashville, Nov. 2016.

Robin Keller is the 2016 INFORMS Past President and an INFORMS Fellow. She was the 2015 Ramsey Medalist and the Editor-in-Chief of *Decision Analysis* (2007-2012). Hints: Read widely, make small commitments at first to new co-authors, and figure out how to not procrastinate on revisions.

1077. Jiaru Bai (presenter), L. Robin Keller, “Challenges in Markov Modeling of Cancer Treatment,” invited talk in Models in Medical Decision Making session, INFORMS Annual Meeting, Nashville, Nov. 2016.

We present a way to build a Markov decision tree to model cancer progression and cost-effectiveness analysis for two or more cancer treatments. We propose several problems researchers can encounter in this kind of research and provide possible solutions.

1076. Ali Esmaeeli (presenter), L. Robin Keller, “Geographically Weighted Multi-attribute Decision Making for Taxi Assignment,” invited talk in Spatial Multicriteria Analysis session, INFORMS Annual Meeting, Nashville, Nov. 2016.

The taxi assignment problem is usually considered as one part of the more general vehicle routing problem (VRP) with a known value function. In this work, we extend this viewpoint to match the problem more with the real world conditions. We consider a map with weighted regions and propose a method to find the best option for each taxi request based on two different attributes. These attributes are the average response time for each region and the rate of accepted requests for each region. We show how to combine these attributes and how to include the region weights into the main value function. Moreover, we present a method for finding the best assignment option based on our defined value function.

1075. Ali Esmaeeli (presenter) and L. Robin Keller, “Real-time Multiple Attribute Taxi Assignment on Weighted Regions,” INFORMS International conference, Kona, Hawaii June 2016.

In this paper we provide a model for the assigning problem in a taxi company from a decision modeling perspective. In our model, different regions of a map have different values for the taxi company. We calculate the desirability of the assignment using two attributes. These attributes are the average response time and the rate of accepted requests for each region. We show how we can calculate weights for regions and attributes in our model. Moreover, we define a value function and an algorithm which can be used to evaluate the value of an assignment in our model.

1074. Jiaru Bai (presenter) and L. Robin Keller, based on work with UCI Physician co-authors, “A Markov Decision Tree Model to Evaluate Cost-Effectiveness of Ovarian Cancer,” INFORMS International conference, Kona, Hawaii June 2016.

We present a way to build a Markov decision tree to model cancer progression and cost-effectiveness analysis for two or more cancer treatments. Olaparib, platinum-based combinations, non-platinum agents, and bevacizumab-containing regimens are compared for the treatment of recurrent ovarian cancer using the Incremental Cost Effectiveness Ratio (ICER). We also propose several problems researchers can encounter in this kind of research and provide possible solutions.

1073. L. Robin Keller, “Nudges,” invited talk to UCI Merage alumni, May 14, 2016.

1072. Plenary speaker, Program Committee Member, and Special Track Organizer, 12th International Conference on Operations Research (ICOR 2016), Havana, Cuba; March 8-11, 2016, <http://samm.univ-paris1.fr/12th-ICOR-2016>, co-sponsored by INFORMS. L. Robin Keller (presenter), Jiaru Bai, Cristina del Campo, “A Markov Decision Tree Model to Evaluate Cost-Effectiveness of Cervical Cancer Treatments.” Also organized a set of talks by INFORMS members for the program committee.

We evaluated the cost-effectiveness of adding the new drug bevacizumab to chemotherapy treatment of advanced cervical cancer. A Markov decision tree was created using recent clinical trial data. In the 5-year model, subjects transitioned through the following monthly states: response to the treatment, progression of the disease, minor complications, severe complications, and death. The 2013 US Medicare Services Drug Payment Table and Physician Fee Schedule provided costs, in US dollars.

On average, patients survived 14.7 months at a US medical system cost of \$5,938 with chemotherapy alone vs. 17.7 months at a cost of \$79,097 with chemo plus bevacizumab. The estimated total cost of therapy with bevacizumab is approximately 13.3 times

that for chemotherapy alone, adding \$73,159 per 3.0 months of life gained. So the incremental cost effectiveness ratio (ICER) is \$24,386 extra cost/extra month.

Patients experienced a health quality level each month depending on the treatment effectiveness and on any complications, ranging from 0 for death to 1 for the baseline of 1 month responding to advanced cervical cancer treatment. Patients survived 11.2 quality adjusted life months (QALmonths^{cc}) with chemo alone vs. 13.9 QALmonths^{cc} with chemo plus bevacizumab. The ICER ratio increased to \$27,096/QALmonth^{cc} due to the smaller difference in QALmonths^{cc}.

Increased costs associated with bevacizumab therapy for advanced cervical cancer are primarily due to the cost of the drug and not the management of bevacizumab-induced complications. Possible future cost reductions in bevacizumab or biosimilars would result in dramatic declines in the added cost of gaining more months of life.

We present two low-cost software alternatives to the Treeage software to compute Markov decision trees: StoTree by Gordon Hazen and a program we wrote in R using the Markov chain package.

1071. L. Robin Keller, invited talk, Multi-Objective Multi-Stakeholder Decision Analysis,” Systems Analysis 2015 Conference, Session 5: Addressing Diversity in Social Systems, International Institute for Applied Systems Analysis (IIASA), Laxenburg, Austria. Nov. 11-13, 2015.

Recording: <https://www.youtube.com/watch?v=cdMfVIAWzg> Robin Keller IIASA talk

A key component of systems analysis is examining the perspectives and actions of multiple stakeholders. Constructing a hierarchy of each stakeholder’s objectives with respect to a decision situation can provide insights on areas of agreement and disagreement. Sometimes, one objectives hierarchy is suitable for a set of stakeholders, and differences in opinions across stakeholders can be characterized by differences in the multiple objectives’ weights. Examples include planning for protection against radioactive iodine releases in nuclear incidents and analysis for the merger of the Operations Research Society of America and The Institute of Management Sciences to become INFORMS. In other cases, an objectives hierarchy will be constructed for each stakeholder because their objectives are so different that construction of separate hierarchies better represents their divergent perspectives. Examples include a tuna fish supplier source selection decision (from the perspectives of the StarKist company, environmentalists, and the San Diego tuna fishing fleet), a prostate cancer treatment decision (of former Intel CEO Andy Grove, his family, his company, and his doctors), and the potential siting of a new Home Depot building supply store.

Having modeled stakeholders’ objectives, dynamic sensitivity analysis can be conducted using sliders in Excel on the objectives’ weights, to rapidly see how the preferred action may change with weight changes. It would also be possible to examine the perceived fairness across stakeholders of anticipated environmental changes or proposed societal policies. Just as groups may differ in objectives, they may also differ in their perception of risks. In particular, scientists and laypeople often judge the magnitude of risks very differently.

1070. L. Robin Keller, “Ramsey Medal Acceptance Speech,” INFORMS conference, Philadelphia, Nov. 2015.

1069. Jay Simon (Presenter), based on work in collaboration with Craig W. Kirkwood and L. Robin Keller, “Decision Analysis with Geographically Varying Outcomes,” invited talk in session on spatial MCDA, INFORMS conference, Philadelphia, Nov. 2015.

This work develops theory to support decisions based on data from geographic information systems (GIS). Preference conditions are introduced, leading to corresponding value and utility functions over GIS data for both single-attribute and multiple-attribute cases. These models of preferences are then applied to example decisions based on GIS data.

1068. Jiaru Bai (presenter), L. Robin Keller, “Markov Cost-Effectiveness Analysis for Cancer Treatment,” invited talk, INFORMS conference, Philadelphia, Nov. 2015.

We present a way to build a Markov decision tree to model cancer progression and cost-effectiveness analysis for two or more cancer treatments. We propose several problems researchers can encounter in this kind of research and provide possible solutions.

1067. Jiaru Bai (presenter), L. Robin Keller, “Markov Cost-Effectiveness Analysis for Cancer Treatment,” invited talk, INFORMS Healthcare conference, Nashville 7-29 to 7-31-15.

We present a way to build a Markov decision tree to model cancer progression and cost-effectiveness analysis for two or more cancer treatments. We propose several problems researchers can encounter in this kind of research and provide possible solutions. The method is used for a clinical study comparing two cervical cancer treatments. This talk is based on “A Markov Model to Evaluate Cost-effectiveness Antiangiogenesis Therapy Using Bevacizumab in Advanced Cervical Cancer” by Lindsey E. Minion, Jiaru Bai, Bradley J. Monk, L. Robin Keller, Eskander N. Ramez, Gareth K. Forde, John K. Chan, Krishnansu S. Tewari.

1066. Jay Simon, Craig W. Kirkwood, L. Robin Keller (presenter), “Decision Analysis with Geographically Varying Outcomes: Preference Models and Applications,” invited talk in session on spatial MCDA in the Multiple Criteria Decision Aiding stream at the EURO Conference, Glasgow, Scotland, July12 – 15, 2015.

We present decision analysis methodology for decisions based on data from geographic information systems. We discuss conditions that may conform with the decision maker’s preferences over a set of alternatives, and we present specific forms for value or utility

functions that are implied by these conditions. The methodology is applied to two hypothetical urban planning decisions involving water use and temperature reduction in regional urban development, and fire coverage across a city.

1065. L. Robin Keller (presenter), Jay Simon, "Teaching Multi-Objective Multi-Stakeholder Decision Modeling With Cases," presented as a main talk at the 11TH International Workshop on Operations Research, Havana, Cuba, March 10-13, 2015, <http://samm.univ-paris1.fr/11th-IWOR-Habana-March-10-13-2015>.

Many operations researchers know about the use of decision analysis to decide among alternative investments (such as pharmacological research and development) using decision trees with chance nodes to compute expected monetary value of different alternatives. Such an analysis aims to maximize a single evaluation measure for a single decision maker. We demonstrate less widely known decision analysis techniques using spreadsheet models of the multiple objective perspectives of the decision stakeholders. We show how to teach students to analyze real-life decision problems using case examples and discuss specific skills students are expected to learn, such as dynamic sensitivity analysis using sliders in Excel on objectives' weights, and typical student questions and errors during case discussion. This methodology has been taught successfully in business courses for both MBAs (including health care executive MBAs) and undergraduate students.

Sometimes, one objectives hierarchy is suitable for a set of stakeholders, and differences in opinions across stakeholders can be characterized by differences in the multiple objectives' weights. Examples include the analysis for the merger of the Operations Research Society of America and The Institute of Management Sciences to become INFORMS and planning for protection against radioactive iodine releases in nuclear incidents. In other cases, an objectives hierarchy will be constructed for each stakeholder because their objectives are so different that construction of separate hierarchies better represents their divergent perspectives. Examples include a prostate cancer treatment decision (of former Intel CEO Andy Grove, his family, his company, and his doctors), a tuna fish supplier source selection decision (from the perspectives of the StarKist company, environmentalists, and the San Diego tuna fishing fleet), and the potential siting of a new Home Depot building supply store. 1064. L. Robin Keller (poster presenter), with Tianjun Feng (UCI Merage doctoral alumnus, Associate Professor at Fudan University), Ping Wu (Fudan University), Yifan Xu (Fudan University), "An Empirical Study of the Toxic Capsule Crisis in China: Risk Perceptions and Behavioral Responses," Society for Risk Analysis conference, Dec. 7-10, 2014, Denver.

The outbreak of the toxic capsule crisis during April 2012 aroused widespread public concern about the risk of chromium-contaminated capsules and drug safety in China. In this paper, we develop a conceptual model to investigate risk perceptions of the pharmaceutical drug capsules and behavioral responses to the toxic capsule crisis and the relationship between associated factors and these two variables. An online survey was conducted to test the model, including questions on the measures of perceived efficacy of the countermeasures, trust in the State FDA (Food and Drug Administration), trust in the pharmaceutical companies, trust in the pharmaceutical capsule producers, risk perception, concern, need for information, information seeking, and risk avoidance. In general, participants reported higher levels of risk perception, concern, and risk avoidance, and lower levels of trust in the three different stakeholders. The results from the structural equation modeling procedure suggest that perceived efficacy of the countermeasures is a predictor of each of the three trust variables; however, only trust in the State FDA has a dampening impact on risk perception. Both risk perception and information seeking are significant determinants of risk avoidance. Risk perception is also positively related to concern. Information seeking is positively related to both concern and need for information. The theoretical and policy implications are also discussed.

1063. Yitong Wang (poster presenter, Merage alumnus, University of Technology, Sydney); Liangyan Wang (Merage alumna, Shanghai Jiaotong University); L. Robin Keller, "Discounting over Subjective Time: One Step towards a Unified Theory of Intertemporal Choice," Society for Judgment and Decision Making conference, Long Beach, Nov. 2014.

Decision makers often face choices involving inter-temporal tradeoffs. Existing research suggests that decision makers in general do not obey discounted utility theory as their discount rates are context dependent. Looking at discounting behavior from a rather different angle, we first showed that the difference in temporal perception was able to explain the magnitude effect, and further we showed that subjective time perception was able to explain multiple anomalies of discounted utility theory simultaneously in a single context. Our finding helps in developing a unified theory for inter-temporal decision making.

1062. James Leonhardt (Merage alumnus, New Mexico State University, poster presenter); L. Robin Keller, "Risk Perception of Multi-risk Options: Health Consumers' Perceived Vaccine Risk," Society for Judgment and Decision Making conference, Long Beach, Nov. 2014.

We compared the effect of probability format on risk perception of single- vs. multi-risk options to understand how probability format may affect health consumers' perceived vaccine risk. The results of two experiments, involving 1,000 parents, suggest that the presence (vs. absence) of pictographs increases the evaluability and influence of side effect probability (vs. symptom) on risk perception. However, for the presence of pictographs to lower risk perception, an evaluation mode (e.g., joint) or a risk option type (e.g., multiple) that allows for the comparison of probability values is necessary.

We present a way to build a Markov decision tree to model cancer progression and cost-effectiveness analysis for two or more cancer treatments. We propose several problems researchers can encounter in this kind of research and provide possible solutions. The method is used for a clinical study comparing two cervical cancer treatments.

1059. L. Robin Keller, “Risk Aversion” is Mislabeled and Misleading,” accepted oral presentation at the Advances in Decision Analysis conference, Georgetown, June 16-18, 2014.

Labeling a concave utility function as risk averse is misleading. Comparing shapes of the value and utility functions, a person is actually relatively risk prone when the concave utility function is below the value function. To improve insight, we should stop telling decision makers “You are risk averse” when their utility function is concave. First, we should determine the shape of the value function, which might be concave, representing decreasing marginal value, and compare it with the shape of the utility function. If the utility function is always above the value function, the person is relatively risk averse. If the utility function is the same function as the value function, the person is relatively risk neutral. If the utility function is below the value function, the person is relatively risk prone.

1058. Yitong Wang (University of Technology, Sydney, Australia), Liangyan Wang (Shanghai Jiaotong University, Shanghai, China), L. Robin Keller, “Discounting over Subjective Time: Towards a Unified Theory of Intertemporal Choice,” accepted poster presented at 2014 Boulder Summer Conference on Consumer Financial Decision Making, May 18-20, 2014.

Discounted utility theory is widely used across many fields and is considered the normative theory of decision making over time (Samuelson 1937). It employs a single and context-independent discount rate to model people’s preferences over time. And researchers have found that people’s behaviors often are inconsistent with the key assumption of the discounted utility theory – the discount rate actually varies across contextual factors (Frederick et al. 2002, Thaler 1981).

From a behavioral perspective, we believe that attributing all variations to the discount rate diminishes the descriptive value of the discounted utility theory, as the discount rate is essentially an economic construct rather than a psychological one. Prior studies have already found some evidence that the variation in perceived temporal distance may contribute to some specific anomalies of discounted utility theory (Zauberman et al. 2009, Bilgin and LeBoeuf 2010). However, to the best of our knowledge, there is little research on the impact of perceived temporal distance on the magnitude effect, nor on bringing multiple anomalies together in one scenario and testing them simultaneously. We investigated the missing components and provided a holistic view via a decision over subjective time model. We tested the proposed model across multiple anomalies and found that subjective time perception is able to explain multiple anomalies simultaneously in a single context.

More specifically, we first show that participants’ subjective perceptions of temporal duration are not independent of the outcome magnitudes, where larger monetary outcomes are associated with shorter subjective time perception (experiments 1a and 1b), and our results replicate the magnitude effect when taking only objective time into account but show a constant discount rate when taking subjective time perception into account (experiment 1c). Then we show that subjective time perception was able to explain multiple anomalies of discounted utility theory (i.e., magnitude effect, long term/short term asymmetry, and delay/date asymmetry) simultaneously in a single context (experiment 2).

Our findings can help reconcile the observed inconsistency in preference over time and make a step forward towards a unified theory of intertemporal decision making.

1056. James Leonhardt (New Mexico State University) and L. Robin Keller, both presented poster on “Possibilities and Probabilities in the Bean Game,” SJDM Annual Meeting, Toronto, November 2013.

This study was designed to test whether when faced with a possible gain decision makers exhibit a preference for options having less possible outcomes, whereas when faced with a possible loss decision makers exhibit a preference for options having more

possible outcomes. Herein an outcome is considered unique when it is qualitatively (rather than quantitatively) different than other possible outcomes. The study found that in the gain condition, there was a greater preference for 2 versus 4 possible outcomes, whereas in the loss condition, this preference was reversed.

Sponsored Session co-chaired by L. Robin Keller and Candice Huynh, "Panel Discussion: Teaching Decision Analysis", INFORMS, Minneapolis, October 2013, in Decision Analysis Society Cluster.

1055. Candice Huynh (presenter) and L. Robin Keller,
"Introduction to Panel Session and Tips for Teaching Decision Analysis Software"

This session will run as a panel discussion. Each panelist will make a short presentation on their perspective on the facets of teaching decision analysis. Then, an open discussion will follow. After introducing the session, I will provide tips on teaching decision analysis software based on MBA teaching experience.

1044. Tianjun Feng, L. Robin Keller (presenter), Yitong Wang, "Time Inconsistency of Risk Perception," Society for Risk Analysis, Charleston, SC, Dec. 2011. Peer-reviewed.

In this paper we investigate inter-temporal changes of risk perceptions in decisions under uncertainty. Time inconsistency of preference has been well documented in the literature, but any possible time inconsistency of risk perception has not received much attention. Two competing theories predict opposite results. The risk-as-feelings hypothesis (Loewenstein et al., 2001) states that

payoffs and probabilities have different roles: when more emotional, people are less sensitive to variation in probability and more sensitive to variation in payoffs. Thus it predicts that an increment in time delay before receiving a binary gamble will lead to a higher impact of probability and a lower impact of payoff on risk perception when judged in the present time, assuming larger temporal distance leads to less emotional reactions. However, construal level theory (Lieberman et al., 2002) and time-dependent gambling (Sagristano et al., 2002) proposed that probability is subordinate to payoff in preferences for gambles, which means payoffs can be regarded as being at a higher level of construal in gambles while probabilities can be regarded as at a lower level. This predicts temporal distance increases the influence of payoffs and decreases the influence of probability on preferences. In this study, we propose that temporal distance has different influences on attributes of a decision alternative with respect to risk perception as well. Experiments are conducted with hypothetical scenarios to examine this proposition where either probability (payoff) is controlled to estimate the influence of time and the payoff (probability) and provide a detailed discussion of our empirical results. Research results will help in developing a useful framework for evaluating anticipated risk consequences, which can be used by DHS to deliver information on anticipated consequences of future societal or natural risks to the public. Possible implications on risk perception of terrorism risks and natural disasters are discussed.

1042. Tianjun Feng, L. Robin Keller (presenter), Yitong Wang, "Time Inconsistency of Risk Perception."

Time inconsistency of preference has been studied by numerous researchers. However, little attention has been paid on time inconsistency of risk perception. In this talk we try to test people's intertemporal changes in their risk perception on abstract gambles. And we found that at different time points, probabilities of losses and potential losses had different roles.

1041. Tianjun Feng (presenter), L. Robin Keller, Yitong Wang, "Counteracting the Uncertainty Effect Bias."

When exhibiting the uncertainty effect, individuals value a binary lottery less than the lottery's worst outcome. Our paper explores how to counteract the uncertainty effect bias by investigating a plausible underlying anchoring-and-adjustment process. Two experiments were conducted to examine if providing an anchor prior to judgments, or introducing additional cognitive load is able to counteract the uncertainty effect bias.

1031. Yitong Wang and L. Robin Keller, "Preference over Ambiguous Time," Poster presented at Behavioral Decision Research in Management conference, June 2010, Pittsburgh.

In this paper, we examine the impact of an ambiguous temporal distance on an individual's discounting behavior. Specifically, we find that people generally discount more when facing an ambiguous point in a time span than when facing either boundary of this time span. One potential explanation is found by conducting further experiments. And one way to aid people to make consistent decisions over ambiguous time is also discussed in detail.

1027. Yitong Wang, Tianjun Feng, L. Robin Keller, "Time Inconsistency of Risk Perception," presented by Wang, San Diego INFORMS conference, October 2009.

Time inconsistency of preference has been well documented in the literature. In this paper we investigate intertemporal changes of risk perceptions in decisions under uncertainty. We propose that temporal distance has different influence on different attributes of decisions (e.g., loss and probability of loss in a gamble) with respect to risk perceptions. We further conduct experiments to examine the proposition and provide a detailed discussion of our results.

1026. Jay Simon and L. Robin Keller, "Reference-dependent Expected Utility: Possibilities and Challenges," presented by Simon, San Diego INFORMS conference, October 2009.

Reference-dependent utility has become a popular method for modeling intertemporal preferences. While it does confer advantages as a descriptive model, one significant challenge is that it can make expected utility very difficult to compute a priori, which limits its prescriptive applicability. In this work, we discuss specific utility formulations that can circumvent this issue, and we analyze general properties that will lead to tractability in reference-dependent expected utility modeling.

1023. Jay Simon and L. Robin Keller, "Decisions with Health Outcomes," Presented by co-author Jay Simon (not attended by Keller), INFORMS Western Regional Conference, Arizona State University, April 25, 2009.

Health-related decisions are often based on heuristics and incomplete information, and may not adequately incorporate decision maker preferences. We formulate a reasonably straightforward expected utility model by imposing some conditions on decision

maker preferences. We then extend the initial work to a reference-dependent expected utility model, which captures the notion of adaptation and gives a better approximation of the utility actually experienced by the decision maker.

Abstract: We study an individual's consumption decisions along an inter-temporal horizon when health, safety and financial risks are involved. Specifically, we propose a behavioral model to analyze individual consumption decisions by linking disparate streams of work on risk perception, time discounting, and consumption vs. savings patterns together. We further conduct a survey on Chinese subjects to test the model and obtain some managerial implications.

Robin Keller (based on discussions with doctoral students Yitong Wang and Jay Simon), "Decision Analysis Research Perspective on Opportunities and Challenges in Dealing with Terrorism and Security Issues," talk at Behavioral Economics and Terrorism Risks Workshop, Aug. 15-16, 2008 at Homeland Security Center for Risk and Economic Analysis of Terrorist Events (CREATE), USC.

Decision analysis provides a valuable perspective to address decisions involving terrorist and security issues. First, at the problem structuring phase, we need to refine methods for individuals, groups, and organizations to generate future possible events. We do not yet even have good methods for generating states of nature which occur randomly. While actions of terrorists can be modeled as random states of nature, it is much more complicated to foresee events created by an opponent acting strategically. Second, at the preference and perception assessment stage, we need to understand the objectives of different (and competing) stakeholders in such decisions. We also need to understand how risk perception and risk adaptation changes over time, using discounting models or other temporal models. There will probably be a disparity in assessed valuation of security if people are asked their willingness to accept (WTA) a reduction in safety or if they are asked their willingness to pay (WTP) for an increase in safety. Finally, at the decision making stage, we could examine methods for resource allocation among safety expenditures in a game setting, decisions in contest games between a government and terrorists, and decisions using dynamically changing decision trees.

1008. Panel member for event sponsored by Social Enterprise Institute (www.SE-Institute.org), co-sponsored with Net Impact and Pepperdine alumni, "Profits with Principles- Closing the Responsibility Gap," Newport Beach, April 22, 2008.

Posters presented at Behavioral Decision Research in Management conference, April 25-26, 2008, La Jolla (UC San Diego):

1007. Tianjun Feng (presenter) and L. Robin Keller, "Analyzing Decisions Involving Product Quality Risks in China and the United States: An Example of Pet Food and Lead-tainted Toys."

1006. Jay Simon and L. Robin Keller (presenter), on "Multiple Attribute Utility in Medical Decision Making."

In medical decision problems, patients are usually concerned with multiple attributes. These decisions are rather unique, because the outcomes are defined over a variable length of time, which is itself one of the attributes being considered. The goal of this work is to develop and analyze a general structure for utility functions to be applied in these situations. One useful concept that has been widely discussed in the literature is quality-adjusted life years (QALYs). This work extends the QALY concept by incorporating the possible occurrence of various conditions as probability curves over time.

1005. L. Robin Keller, "How to Make Smart Choices: Operations and Decision Technologies," Merage School, UC Irvine, Brown Bag Seminar, February 14, 2008.

Participation in Symposium on "Focus the Nation at UC Irvine: Sustainability and Climate Change Solutions," Jan. 30-31, 2008. Focus the Nation events were held at over 1,400 campuses nationwide to address global climate change, discuss sustainable solutions, and take action to implement collaborative approaches to this intergenerational crisis. Two posters in Sustainability Showcase:

1004. Poster presenter: Tianjun Feng, collaborating with L. Robin Keller, Craig Kirkwood, Nancy S. Jones, Jay Simon, and Lowell Kessel, "A Multiple-objective, Multiple-stakeholder Decision Analysis Approach for Water Resources Planning"

1003. Poster presenter: Jay Simon, collaborating with L. Robin Keller, Craig Kirkwood, and Tianjun Feng, "Preference Functions for Environmental Decisions with Spatially-Varying Attributes"

Posters presented at the Society for Judgment/Decision Making conference, Long Beach, November 2007:

1002. L. Robin Keller (presenter), Craig Kirkwood, Arizona State Univ., and Jay Simon, "Modeling Decision Situations with Spatially-Varying Attributes"

1001. Tianjun Feng (submitter) and L. Robin Keller (presenter), "Modeling the Effects of Reference Point Dependence and Loss Aversion on Supplier Selection"

1000. Dipayan Biswas (UCI alumnus at Bentley College), L. Robin Keller, Bidisha Burman (Appalachian State), "Making Probability Judgments of Future Product Failures: Packing versus Unpacking the Problem," 2007 Association for Consumer Research Conference, accepted on 7-27-07 for a) presentation by Biswas in competitive paper session at Oct. 25-28, 2007 Memphis conference and b) extended abstract for publication in conference proceedings. AWARDS, GRANTS AND HONORS

Winner of the 2020 Clemen-Kleinmuntz Decision Analysis Best Paper Award, formerly called the Decision Analysis Special Recognition Award. This award, with a \$2000 prize, is given annually for the paper most worthy of recognition published in the Decision Analysis journal (published by INFORMS) for that year. For the paper: Jeffery L. Guyse (Merage PhD alumnus, Professor, Technology and Operations Management, College of Business Administration, California State Polytechnic University, Pomona), L. Robin Keller, Candice H. Huynh (Merage PhD alumna, Assistant Prof., Cal Poly, Pomona), "Valuing Sequences of Lives Lost or Saved Over Time: Preference for Uniform Sequences", Decision Analysis, 17(1):24-38, March 2020

Finalist for the 2020 Decision Analysis Special Recognition Award. For the paper: Jay Simon (Merage PhD alumnus, Associate Professor, American University), Donald Saari (Professor Emeritus, UCI Social Science), L. Robin Keller, "Interdependent Altruistic Preference Models", Decision Analysis, 17(3), Sept. 2020, pp. 189-207.

L. Robin Keller one of 10 women interviewed and spotlighted for longtime contributions to operations research: Kara Tucker, "Powerful, pragmatic pioneers: Personal profiles of 10 pillars of the O.R. profession who blazed trails, broke barriers and busted down doors for others to follow (plus one 'Rising Star')", <https://pubsonline.informs.org/doi/10.1287/orms.2019.01.14/full/>, OR/MS Today, 46(1) February 2019. Magazine editorial explains selection process; more than 30 candidates were first considered and 10 were selected (Peter Horner, "Pioneer Women of O.R.", <https://pubsonline.informs.org/doi/10.1287/orms.2019.01.10/full/>). (also listed above under media interviews)

Ramsey Medal, for distinguished contributions to decision analysis, highest award of the Decision Analysis Society of INFORMS, 2015, <https://www.informs.org/Recognizing-Excellence/Award-Recipients/L.-Robin-Keller>

Best Reviewer for *Risk Analysis*, 2010

UCI Merage School of Business **Faculty Service Award**, June 2008

Recognized in Who's Who in Science and Engineering

Kimball Medal Recipient for 2006, presented at Pittsburgh INFORMS conference, for distinguished service contributions to Operations Research and the Management Sciences. <https://www.informs.org/Recognize-Excellence/INFORMS-Prizes-Awards/George-E.-Kimball-Medal> <https://www.informs.org/Recognize-Excellence/Award-Recipients/L.-Robin-Keller>

Tianjun Feng, L. Robin Keller, and Xiaona Zheng, "Home Depot in San Juan Capistrano: Multi-objective Multi-stakeholder Decision Case," Fall 2005, Presentation at INFORMS conference Case Competition sponsored by INFORMS Forum on Education, recipient of Finalist award.

INFORMS Fellow, awarded Oct. 25, 2004, for contributions to Operations Research and the Management Sciences, <https://www.informs.org/Recognize-Excellence/Fellows>

Winner of the “**Breaking the Frame Award**” at Western Academy of Management meeting in March 2002 by the Journal of Management Inquiry for best paper of 2001, co-authored with GSM doctoral alumna Prof. Monika I. Winn of University of Victoria.

UCI Graduate School of Management **Faculty Service Award**, May 1993.

UCI Graduate School of Management **Excellence in Teaching Award**, to the best teacher of the year, upon vote by students, 1982-83, 1985-86.

UCLA Graduate School of Management Outstanding Graduate, 1982-83. Recognition of academic distinction upon vote by faculty and sponsored by UCLA Alumni Association.

UCLA Academic Senate's Special Commendation as a Teaching Assistant, 1975-76.

Member of Beta Gamma Sigma, the national business honorary society.

Listed in Who's Who in the West, Who's Who of Emerging Leaders in America, Who's Who in American Education, Who's Who in California, International Directory of Distinguished Leadership Dictionary of International Biography, 2000 Notable American Women, and International Who's Who of Professional and Business Women.

Awards to students based on research collaborations:

Dispayan Biswas, dissertation proposal awards:

Winner, Association for Consumer Research–Sheth Foundation dissertation Proposal Award, \$2,000 check and plaque awarded at October 2002 conference

Runner-up, Academy of Marketing Sciences Mary Kay Dissertation competition, presented at May 2003 conference.

Xiaona Zheng, awarded a Decision Analysis Society student travel grant (\$200) on 8/13/03 to attend October 2003 INFORMS Conference and present EPA funded work on “Time Weighted Utility for Multiobjective Multistakeholder Perspectives for Environmental Problems,” with L. Robin Keller, Dipayan Biswas and Tianjun Feng.

Jay Simon, Sanli Pastore & Hill Excellence in Economics Writing Award. UCI Institute for Mathematical Behavioral Sciences, Third Place, based on his paper on prostate cancer decision making in Interfaces. June 2009 press coverage of his paper:

<http://www.sciencedaily.com/releases/2009/06/090615144429.htm>

James M. Leonhardt, Finalist in 2013 Decision Analysis Society of INFORMS Student Paper competition for his paper with L. Robin Keller and Cornelia Pechmann. October 2011. “Avoiding the Risk of Responsibility by Seeking Uncertainty: Responsibility Aversion and Preference for Indirect Agency When Choosing for Others,” in Journal of Consumer Psychology, <http://ssrn.com/abstract=2015956>. (He was a Marketing doctoral student at the time the paper was published, and is now an Assistant Professor, New Mexico State.)

Jeffery L. Guyse, Decision Analysis Society of INFORMS, finalist in 1999 student paper competition (for papers with student as lead author) for Guyse, Keller, and Eppel’s “Valuing Environmental Outcomes: Preferences for Constant or Improving Sequences.”

Grants and Fellowships

USC CREATE Center (subcontract from Department of Homeland Security funds), “The Effects of Time on Anticipated Consequences of Risks,” Keller (PI), Yitong Wang (student investigator), March 2011-Sept. 2011, \$19,982; Oct. 2011-Sept. 2012, \$15,000 (Candice Huynh and Yuhong He, student investigators)

The John S. and Marilyn Long Institute for U.S.-China Business and Law, \$5000 grant on 7-2-2011 to Tianjun Feng (Fudan University), L. Robin Keller, and Yitong Wang (Tsinghua University), “A Cross-national Study of Food Safety Management: Comparisons between the United States and China”

National Science Foundation Dissertation Grant, 2010-2011, “Doctoral Dissertation Research in DRMS: Decision Research on Time, Risk, and Ambiguity.” Keller (PI), Yitong Wang (Co-PI). \$6,270

UCI Environment Institute Grant, Winter 2009-, Principal Investigators: Bill Tomlinson (Informatics), Brett Sanders (Civil & Environmental Engineering), and Robin Keller (Merage School), “*Using IT to Compress Perceived Time and Space in How People Think About Global Change: A Step Towards Behavioral Change.*” \$12,051 to Keller and RAs, total \$48,000= \$38,000 from Institute + \$10,000 from UCI UWRC

Many people find it difficult to engage with environmental issues, in part because global change occurs on scales of time and space that are relatively large compared to the usual scope of human decision making. People respond enthusiastically to fast-acting disasters such as fires and earthquakes, but less so to issues that occur more gradually over many years, even when

the consequences are far greater. To date, there has been little research on how to connect long-term global environmental change to human scales of time and space in a systematic way, thereby enabling behavioral change. Our efforts will focus on the science and public perception of sea level rise.

- National Science Foundation, L R. Keller (PI) and Jay Simon (co-PI), to University of California, Irvine, Proposal ID SES-0823458, "Doctoral Dissertation Research in DRMS: Cross-Disciplinary Analyses Using Multi-Attribute Utility Theory," submitted Feb. 7, 2008, notified of recommended funding 5-28-2008, \$5,200. To support Jay Simon's dissertation expenses. (Start date 8-1-08, 12 months.) The e-Synopsis for the project: <http://apps.research.uci.edu/awardsynop/>. At the prompts, enter the following information: Award Number: SES-0823458 , Synopsis Cycle: 1.
- National Science Foundation, Research Center to Arizona State University, "Decision Center for a Desert City" for a 5 year Center grant, \$6.9 million, 2004-2009, subsequently extended for another 5 year term, Keller served on decision research team with Craig Kirkwood of ASU, Supported former doctoral students Tianjun Feng (non-salary research) and Jay Simon (RA support) and partial faculty summer salary in summer 2009
- U.S. Environmental Protection Agency, "Identification and Control of Non-Point Sources of Microbial Pollution in a Coastal Wetland," Co-Principal Investigator with PI Brett Sanders, UCI Dept. of Civil and Environmental Research, grant R-82801101-0, 8/1/00-7/31/04, \$895,234, with \$145,020, under Keller's supervision on stakeholders' perspectives (Supporting Dipayan Biswas, Xiaona Zheng, & Tianjun Feng)
- U.S. Environmental Protection Agency, "Assessing Preferences for Environmental Decisions with Long-Term Consequences," Principal Investigator L. Robin Keller, \$181,851, 8/1/98 - 7/31/2001, under EPA/NSF STAR Partnership for Environmental Research EPA grant R826611-01-0, and a subcontract to Decision Insights, Inc., Dr. Thomas Eppel (Supported Jeff Guyse's doctoral dissertation work)
- National Science Foundation Grant #SBR-9605826, "The Chinese vs. North American Perceptions and Decision Making Concerning Fairness and a Framework to Incorporate Culture into Decision Making," Principal Investigator L. Robin Keller and Co-Principal Investigator Wen-Qiang Bian, \$9,030, 1997-98 (Supported Bian's doctoral dissertation work)
- National Science Foundation Grant, "Foundations of Risk Analysis: Theoretical and Empirical Investigation," Faculty Associate (with Co-Principal Investigators Rakesh K. Sarin and Robert L. Winkler), 1988-90, \$119,000
- U.S. Environmental Protection Agency, Office of Policy Analysis grant, "Economic Analysis of Risk to Heart Disease Patients from Exposure to Carbon Monoxide," Co-Principal Investigator, 1985 (with Steven D. Colome)
- National Science Foundation Grant, "Foundations of Risk Analysis," Senior Associate, 1984-86 (with Rakesh Sarin), \$82,000
- UCI Committee on Research Faculty Research Grant:
1986-87 - "Foundations for a Normative Theory of Decision Problem Structuring"
- FHP Research awards:
1986-87 - "Risk Analysis and Equity"
1986-87 - "The Management of Emergency Medical Services," with Bruce Lamar
- UCI Faculty Fellowships administered through GSM:
1983-84 - "Modeling Preferences: Theoretical and Empirical Investigation"
1984-85 - "Foundations of Risk Analysis"
1985-86 - "Biases in the Modeling of Preferences"
1986-87 - "Risk Analysis and Equity"
- UCI Instructional Improvement Grant, 1983-84, with Carlton Scott
GSM Instructional Improvement Grant, 1986, with Bruce Lamar
University of California Intercampus Activities Award, "Determinants of Risk Perception," 1985-86
- UCI Career Development Awards:
"Foundations for a Normative Theory of Decision Problem Structuring," W 1987, sabbatical supplement
"Modeling of Perceived Risk," June 1984, research travel
"Modeling Preferences: Theoretical and Empirical Investigations," Spring 1984, course release

PROFESSIONAL SOCIETIES

Decision Analysis Society of INFORMS

Advances in Decision Analysis conference at Darden in Northern Virginia, June 22-24, 2022,
sponsored by the Decision Analysis Society of INFORMS

Scientific committee member

Advances in Decision Analysis conference at Bocconi University, Milan, Italy, June 19-21, 2019,
sponsored by the Decision Analysis Society of INFORMS

Scientific committee member

Chair, Ramsey Medalist Panel

2017 Decision Analysis journal Publications Award Committee Member

2017, 2018, 2019 Ramsey Medal Selection Committee Member

Advances in Decision Analysis conference at Georgetown, June 2014,
sponsored by the Decision Analysis Society of INFORMS

Steering committee member (high level advice)

Appointed session chair for Research Incubator session

DA 50-Year Celebration Program Committee- 2014

Past-Chair (renamed Past-President), 2002-04

Chair, Spring 2000-2002

Chair-Elect, Spring 1998-2000

Publications Award Competition in 2012, for a 2010 paper, member of committee

Chair, Practice Award Competition, 2002 and 2003

Session chair activity is listed above under conference talks.

Institute for Operations Research and the Management Sciences (INFORMS)

President, 2015; President-Elect, 2014; Past-President, 2016 (Executive Board Member)

<https://www.informs.org/About-INFORMS/History-and-Traditions/Miser-Harris-Presidential-Portrait-Gallery>

Board Liaison to INFORMS Roundtable (heads of OR groups in companies)- 2014

Board Liaison to INFORMS History and Traditions Committee, 2016 (as Past President)

INFORMS Strategic Planning Committee, Co-chair, 2016

President's Award Committee Chair, 2015; Member 2016 and 2017.

Nominations Committee Member for 2015 election- 2014, Chair for 2017 election- 2016

Committee on the Board Member, 2016

Ad Hoc Committee on Diversity Member, 2016

Master INFORMS Judge for Posters (walk through posters with attendees & moderate discussion
with presenters, judge posters), INFORMS Annual Meeting, Nov. 2016

Conference Board of the Mathematical Sciences, Investments Committee Member,

www.cbmsweb.org (as INFORMS President, 2015)

Ad Hoc Board Committee on Open Access Chair, 2014

Kimball Medal Committee Member 2011 and 2012, Chair, 2013

Special Ad Hoc Committee on Publication Strategy Member, appointed 9-07

INFORMS Board of Directors: Founding Director-at-Large, '95, '96, Liaison for Education Cluster

Finance Committee Member, 1995

NSF Liaison Committee Member, 1995-98

The Institute of Management Sciences

Elected Vice President-Finance, Sept. 1993 - Dec. 1994, served simultaneously as chair of TIMS

Investment Committee

TIMS Nominations Committee, Spring 1993

Chair, Cost-Benefit Subcommittee to Evaluate TIMS/ORSA Merger, Fall 1993

Council Member, 1991-93

Chair, Editorial review committee for Organization Science, 1992

OR/MS Board Finance Committee member, 1992-94

Operations Research Society of America, Elected to Full Member, 1985

Nominations Committee Member, 1990

Employment Opportunities Chair, TIMS-ORSA Joint National Meeting, Los Angeles, April 1986

Orange County ORSA-TIMS Joint Chapter, Founder, Member through 1989
ORSA Special Interest Group on Decision Analysis
Elected Council Member, 1986-89
Student Paper Competition: Judge (1986), Chair (1987)

Society for Risk Analysis

Society for Judgment and Decision Making, Charter Member

European Association for Decision Making

International Federation of Operations Research Societies (IFORS) member of Program Committee for 2002 Conference in Edinburgh; 2005 conference in Hawaii

Invited Nominator of Candidates for Bank of Sweden Prize in Economic Sciences in Memory of Alfred Nobel, most recently 1/2022

Member in 6/2009 of the International Programme Committee of the International Conference on "Uncertainty and Robustness in Planning and Decision Making." INESC Coimbra, an R&D unit of the University of Coimbra, conference organized in the framework of the COST Action IC0602 on Algorithmic Decision Theory (www.algodec.org), held April 15-17, 2010.

Program committee, 13th International Conference (2018)/Workshop (2019) on Operations Research, Havana, <https://rev-inv-ope.univ-paris1.fr/icor-2018-havana-cuba/>, <https://rev-inv-ope.univ-paris1.fr/iwor-2019-havana-cuba/> (I did not attend these years' conferences; the program committee shows my continuing support.)

First Annual ComplianceNet Conference, UCI Law School, June 1-2, 2018, session chair on "Good and Bad Apples in Compliance: An Ethics Approach"

EDITORIAL SERVICE

Editorial
Appointments

Decision Analysis

Editor-in-Chief, Term 1: 1/2007-12/2009
Term 2 and final term: 1/2010-12/2012

Founding Member of Editorial Board (2004-on)

Acting Editor-in-Chief and Acting Associate Editor
for selected papers, 2013-on

Management Science Decision Analysis department

Departmental Editor, 4/1994-4/1998

Associate Editor, 1989-March 1994

EURO Journal on Decision Processes

Founding Member, Editorial Board 2012-

Investigación Operacional (Cuban OR journal)

Editorial Board, 2017-

<https://rev-inv-ope.pantheonsorbonne.fr/en> <https://rev-inv-ope.pantheonsorbonne.fr/journal#Board>

Management and Business Review (Winter 2021 vol 1 issue 1)

Advisor (2021-)

<https://mbrjournal.com/winter-2021-reader/>

Journal of Risk and Uncertainty

Editorial board, 1995-February 2011

Journal of Behavioral Decision Making

Editorial board, Winter 1994-Fall 2010

Organizational Behavior and Human Decision Processes

Editorial board, Jan. 2000-June 30, 2004

Information and Decision Technologies (formerly Large Scale Systems), Associate Editor, 1989-93

Reviewer
Activity

In addition to journals above: Journal of Behavioral Decision Making, Operations Research, Risk Analysis, Theory and Decision, IEEE Trans. on Systems, Man, and Cybernetics, OMEGA, Medical Decision Making, Naval Logistics Research Quarterly, European Journal of Operations Research, Decision Sciences, Information Systems and Operational Research, Psychological Science, Journal of Mathematical Psychology, Environmental Management, American Economic Review, Geneva Risk and Insurance Review, Wiley Encyclopedia of OR/MS, Medical Education Online

National Academies/National Research Council

External Reviewer

(Summer 2011- "Improving Metrics for the Department of Defense Cooperative Threat Reduction Program")

National Meeting paper reviewer

American University (Washington, DC)

Reviewer: Faculty Sabbatical Research Proposals

Journal

Planning

Spearheaded effort to found Decision Analysis journal.

Organized planning meeting in San Francisco, February 1999, and conference panel discussion.

Chair, Decision Analysis Journal Founding Editor Search Committee, Dec. 2000-April 2001.

TEACHING

Doctoral Student

Development

Amy Williams, ODT PhD student, co-chair with Prof. Shuya Yin, work on product returns and effect on environment. Summer 2021-

Qi Yan, ODT PhD student, "Essays on Impacts of Online Interactions on Customer Behaviors", advisor from Summer 2020-, chair of advancement committee, 8-24-21 (with S. Yin, C. Pechmann, C. del Campo, M. Choi on committee).

Alexander Robinson, ODT PhD student, advisor, Fall 2017-Summer 2020. Advancement committee member (John Turner, Chair, other members L. Gui, A. Regan, S. Yin), "Estimating Hotel Demand with Expectation Maximization", June 10, 2021, final defense member, graduation expected June/Summer 2022. Position at CSX (railroad company), beginning Spring 2022.

Carrie Wang, O&M PhD student, advancement committee member, "Sea Turtles: The Return of Highly Skilled Professionals to China from Abroad", June 15, 2020. (Will also be on final defense committee.)

Diana Xiuyao Yang, Economics PhD student, advancement committee member, "Adaptive Learning and Cryptocurrencies' Price Volatility", 8/20/2019.

Ali Hassanzadeh Kalshani, ODT PhD student, advancement committee member, "Analysis of Pricing Mechanisms in a Resource Exchange Economy", 6/5/19, final defense 7/6/2021 (I was not on final committee). Alliance Manchester Business School, UK, lecturer (US equivalent is assistant professor), August 2021.

Kyle Kole, Economics PhD student, advancement committee member, "Effects of Socializing on Efforts in Team Production", 2/12/2019.

Alexander Ruiz, O&M PhD student, advancement committee member, "Unpacking benevolent sexism through an investigation of the effects of helping behaviors", 8/20/18. (Final defense 4/22/19, Keller not on final committee)

Yiwei "Derek" Wang, ODT PhD Student, dissertation committee member, "Essays on Technology and Data Analytics in Operations Management", final defense May 24, 2021 (member with Chair Shuya Yin, other member is Lauren Lu at Dartmouth), advancement committee member, "Essays in Operations Management for Innovations", 6/13/18, graduation 6/2021.

Pele Schramm, Social Science PhD student, advancement committee member, "Examining Transitivity Violations in Probabilistic and Temporal Discounting", 6/5/18.

Alexander Bock, hosted visiting PhD student, October 2017, Information Systems, University of Duisburg-Essen, Germany.

Ali Esmaeeli, ODT PhD student, "Improving Efficacy of Support groups in Online Environments", advisor, June 2015-Summer 2020. Advancement to candidacy Sept. 1, 2017. Co-chair for dissertation with Connie Pechmann. Placed at Google, Irvine. Graduation Summer 2020 (final defense 7-22-20).

Vahid Nourbakhsh, ODT PhD student, advancement committee member, Sept. 2016, "A Global Optimization Algorithm for Routing Heterogeneous Jobs to Heterogeneous Servers." Final defense

- committee member, "Routing Dynamics: Optimization, Measurement, and Applications", 11/1/2018. Senior Operations Research Scientist, Wayfair, Nov. 2018-.
- Jiaru Bai, Operations and Decision Technologies (ODT) PhD student (Decision Analysis, Markov Models), advisor, Sept. 2012-March 2014. Continuing advice on Markov decision tree modeling for cervical and ovarian cancer cost-effectiveness analysis, April 2014-May 2015. Co-chair of dissertation committee with Prof. Shuya Yin, June 2015-June 2017. Advancement proposal, "Markov cost-effectiveness analysis for cancer treatment," advanced in June 2015, graduation June 2017, Thesis title: "Interdisciplinary research in operations management: Applications in healthcare, retailing and on-demand service platforms", assistant professor, Binghamton University (SUNY), Fall 2017-Dec. 2018, assistant professor Wake Forest, Jan. 2019-. First place, POMS 2017 Supply Chain Management College student paper competition (May 2017), POMS conference, Seattle, based on her joint work with Rick So and Chris Tang at UCLA. 6 papers were in the finalist list including papers from (http://poms.org/2017/04/2017_college_of_supply_chain_m_1.html) CMU, MIT, UT Dallas and University of Toronto.
- Percy Mistry, Cognitive Science, advancement committee member, 7-27-15, "Perspectives on Cognitive Modeling of Adaptive Behavior". (Final defense was May 29, 2018; I was not on the final committee.) August 2018, postdoc at the Stanford Cognitive & Systems Neuroscience Laboratory.
- Bart Knijnenburg, ICS, proposal defense, 6-9-14, "A user-tailored approach to privacy decision support", dissertation defense 7-27-2015, Clemson University Assistant Prof. in Human-Centered Computing, Fall 2015.
- Rico Bumbaca, Marketing doctoral student, independent study on decision theory, Summer-Fall 2013.
- James Leonhardt, Marketing, advancement committee (Spring 2012) and dissertation committee (May 7, 2013), "The Name-Control Effect in Consumer Judgment and Decision Making", Assistant Professor, New Mexico State Univ., Fall 2013-June 2016, University of Nevada, Reno, Fall 2016-.
- Kim McCarthy, Organization and Management (O&M), "Is E-Rudeness At Work Contagious? The Impact of Rude Email on Employee Performance", June 14, 2013.
- Greg Autry, Policy, "In New Space, No One Can Hear Them Scream: Government Roles in Community Emergence," advancement committee, July 2012.
- Yuhong He, ODT PhD student, working committee member, March 2011-, advancement and dissertation committee member, advanced in August 2011, graduated June 2014, "Joint Selling of Complementary Suppliers under Competition and Alliance Formation among Complementary Suppliers for Durable Products", Assistant Professor, Clemson University, Fall 2014. Assistant Professor, Cal State Fullerton, Fall 2015.
- Hannah Oh, Marketing, 3-person working committee member, Spring 2011-graduated July 2014. Assistant Professor, UT Rio Grande Valley (former Univ. of Texas- Brownville). As of 9-16, at Univ. of Nebraska, Omaha.
- Brent Miller, Cognitive Science, dissertation committee member, "The Wisdom of Crowds and Rank Ordering Problems Can We Aggregate Where We Cannot Average?" Sept. 2011.
- Patricia Wellmeyer, Accounting, visiting doctoral student from NHH Norway, dissertation advice, 2011, Decisions under ambiguity and group choice (June 2016 final defense, lecturer with potential security of employment at UCI).
- Laura Huang, Organization and Management, dissertation committee member, "A Test of the Impact of Gut Feel on Entrepreneurial Investment Decisions," March 15, 2011 advancement, Assistant Professor at Wharton as of Fall 2012-2017. (Graduated Winter 2013). Associate professor, Harvard Business School, 2018-.
- Yeong Seon Kang, Marketing, dissertation advancement committee, "Essays on Marketing Strategy: Quality Competition, Distribution Channel Structure, and Downsizing," committee formed in Sept. 2010, official advancement in Spring 2011. Final defense on Dec. 5, 2012.
- Yitong Wang, ODT PhD student, advisor and dissertation chair, ODT doctoral student, beginning September 2007-Sept. 2011, advanced to candidacy in Winter 2010, "Decision Research on Time, Risk, and Ambiguity", Assistant Professor, Tsinghua University, Beijing, Industrial Engineering, from Fall 2011-summer 2013; Lecturer in marketing (i.e., assistant professor) University of Technology Sydney, Fall 2013-, Senior Lecturer 8-2018- June 2019 (i.e., associate professor), with continuing affiliation 7/2019-on while in China. July 2019- to Alibaba, Behavioral Economics Mechanism Design area, China.
- Candice Huynh, ODT PhD student, advisor, Summer 2010-June 2014, passed Phase I exam 10-2011. Advancement to candidacy, chair, "Risk Attitudes in the Supply Chain, Proxy Attributes and Personal

Consumption”, May 14, 2013. Assistant Professor, Cal Poly Pomona, Fall 2014, **Associate Professor, Summer 2020.**

Heidi Tucholski, IMBS Doctoral student independent study of decision theory, Winter/Spring 2010, “Incentivized Decisions in the U.S. Air Force: Stepping Back to Look at the Big Picture”, March 4, 2013, Advancement committee. Graduated Winter 2014.

Matthew Feldmann, IMBS Doctoral student independent study of decision theory, Winter 2010.

Jay Simon, 9/2005-6/2009, ODT PhD student, advisor and dissertation chair, “Cross-Disciplinary Studies in Multiattribute Utility.” Advanced to candidacy 3/20/08. Assistant Professor, Naval Postgraduate School, Monterey, CA, as of 8-1-09. Moved to American University in Washington DC, summer 2015. Tenured Associate Professor as of Fall 2018.

Wenting Pan, ODT PhD student, advancement committee member, May 2009-2012, Three Essays in Inventory Management, dissertation title: “Optimal Operational Strategies for an Assembly System Under Supply Uncertainty,” final defense 5-21-2012. St. Mary’s, CA, Assistant Prof., Fall 2012.

Dante Pirouz, Marketing, advancement to candidacy committee, “The Dark Side of Product Attachment: Reactivity of Addicted Users to Ad Cues” on neuroscience and tobacco smoking ads, Dec. 2008, graduated 6/2010. Assistant Professor, Ivey School, University of Western Ontario, starting Fall 2010.

Anitza Ross Grubb, Organization and Management, Dissertation Committee, “The Effect of Mood on Escalation of Commitment,” 2008-10, advanced 2/12/2010, final defense July 2011.

David Tannenbaum, Social Ecology, Psychology and Social Behavior, 2/24/10, advancement to candidacy committee member, “A Reasons-based Framework for Policy Defaults”, post doc at UCLA in 2011-14 and U. of Chicago 2014-16, University of Utah assistant prof., Fall 2016.

Ofer Mintz, Marketing, advancement to candidacy committee, “What Drives Managerial Use of Metrics and Does it Matter to Performance?”, 4-29-10, final defense, 11-28-11, Visiting Professor, Interdisciplinary Center (IDC) Herzliya in Israel in Spring 2012, Assistant Professor, marketing, LSU, Fall 2012, Lecturer (i.e., assistant professor), University of Technology, Sydney, July 2017-.

Smith Williams. Department of Economics, Advancement to candidacy committee, 5-2009.

Tianjun Feng, ODT PhD student, 2002-June 2008, advisor, dissertation chair, advanced to candidacy on 3-15-06, graduated June 2008, “Three Essays in Supplier Management”. Assistant Professor, Fudan University, Shanghai, as of Sept. 1, 2008. Promoted to Associate Professor, Jan. 2012; Full professor, Dec. 2016.

Burçak Ertimur, Marketing, advancement to candidacy committee, “The Impact of Customer Generated Advertising on Corporate and Brand Images: The Issue of Source Effects,” September 2007. Assistant Professor of marketing, Fairleigh Dickinson University, as of Fall 2009.

Jiana-Fu (Jeff) Wang, Transportation Studies, UCI, advancement to candidacy committee, “Operational Strategies for Single-Stage Crossdocks,” March 2007, final dissertation defense, 10-27-08. Assistant professor, Department of Industrial and Systems Engineering, Chung Yuan University, as of February 2009. Department of Marketing at National Chung Hsing University (Taiwan) since August 2009.

Liangyan Wang, Marketing, advancement to candidacy committee, “Toward a Hierarchy of Reference Group Messages: Distinguishing the Effects of Informational, Value-expressive, and Utilitarian Reference Groups,” September 2006. Assistant Professor, Shanghai Jiao Tong University, beginning Fall 2008, Associate Professor as of 2010.

Shaoxuan Liu, ODT PhD student, doctoral dissertation committee, “The Impact of Uncertain Supply on Marketing and Inventory Decisions,” September 2006. Assistant professor, Shanghai Jiao Tong University, beginning Fall 2008. Assoc. Prof. 2013-2016. Summer 2016 went to become founding Executive Director, [Ningbo Supply Chain Innovation Institute China \(NSIIC\)](#), established in a partnership of the Center for Transportation & Logistics (CTL) at MIT with the government of Ningbo; the NSIIC is part of the MIT Global Supply Chain and Logistics Excellence (or SCALE) Network.

Merlyn Griffiths, Marketing, advancement to candidacy committee, Consumer territoriality behavior, 7-06, graduated 2007. Assistant Professor, University of North Carolina, Greensboro, Fall 2007. Professor as of 2013.

Qiang “David” Zeng, ODT PhD student, 2004-05, advisor.

Xiaona Zheng, ODT PhD student, research assistant, summer 2002-summer 2003, co-author 2004-05, moved to Duke University to complete degree with Prof. Jeannette Song, named Assistant Professor at Peking University in summer 2005, Associate Professor from 2010.

Daniela Balkanska, advancement to candidacy committee member, August 2005, “Disposition effect and heterogeneous beliefs.” Assistant Professor, San Francisco State.

Tom Moliterno, dissertation committee member, graduated 6/05, "Behavioral Antecedent to Firm-Level Resource Replacement and Acquisition," Assistant Professor of Management, Moore School of Business, Univ. of So. Carolina, appointed summer 2005. Associate Professor, U. Mass Amherst, as of 2013.

Guangzhi "Terry" Zhao, Marketing, Spring 2002, dissertation committee member, advanced 9/03, graduated 2005, "Regulatory Focus, Message Framing, and the Persuasiveness of Antismoking Ads Targeted at Youths." Received dissertation award of \$60,000 from Tobacco Related Disease Research Program. Assistant Professor of Marketing, School of Business, University of Kansas, summer 2005. Assistant Professor, Loyola U., Maryland as of 2013.

Dipayan Biswas, Marketing, Fall 2001-04, dissertation committee member, advanced in summer 2002. Graduated 6/04, "Information Formats for Presenting Negative Product Information: Managerial and Regulatory Perspectives," Assistant Professor. Bentley College, Fall 2004. Associate Professor, U. South Florida, as of 2013.

Zhu Liu, 8/04, Advancement to Candidacy Committee, "Forecast Properties and Impact of Belief Updating." Gary Henderson, Organizational Behavior, Summer 2003, advancement to candidacy committee.

Kevin Shang, ODT PhD student, dissertation committee, June 2001-June 2002 (Assistant Professor, Fuqua School of Business, Duke University, beginning 7/02). Associate Prof. with tenure, 7/10-.

Jeffery Guyse, ODT PhD student, 9/96-12/2000, doctoral committee chair. Dissertation title: An Empirical Investigation into Preferences over Sequences of Monetary and Environmental Outcomes: A Decision Analysis Approach (Professor, Calif. State Polytechnic University, Pomona.)

Ping Lin, Fall 2002-03, dissertation committee member (Assistant Professor of Accounting, University of Texas, Pan American, beginning 7/02).

Steve Mattingly, 1999 and 2000, Civil Engineering, dissertation committee. (Asst. Prof., Univ. of Alaska).

Jiongjong Song, Engineering, advancement to candidacy, Sept. 2000, dissertation defense, Spring 2003.

Rod Smith, Accounting, advancement to candidacy, May 2000 (Asst. Prof., Univ. of Arkansas).

Kuntara Pukthuanthong, Finance, advancement to candidacy, June 2000.

Yanbo Jin, Finance, advancement to candidacy, June 2000.

Alan Meister, Economics, 1998, advancement committee.

Annaliese Franz, Chemistry, 1998, advancement committee.

Gerald Fisher, Social Science, 1997-99, advancement and dissertation committee.

Robert Sneddon, Social Science, 1997-99, advancement and dissertation committee (Cal Tech).

Niramol Jindanuwat, 1993-99, Phase II committee, research assistant, dissertation committee. (Price WaterhouseCoopers, Bangkok).

Yung Jae Lee, ODT PhD student, 1992-93, phase II committee, 1994, advancement committee. "A Framework for Understanding the Impacts of Every Day Pricing". Assistant Professor, St. Mary's. Full professor and Dept. Chair as of 2013 (Business analytics). In 2018-19, Interim Dean of St. Mary's School of Economics and Business Administration; Dean, Barowsky School of Business, Dominican University of California, Fall 2019-on.

Wen-Qiang Bian, ODT PhD student, phase II committee, phase II advisor, dissertation chair, 1994-9/1998. Dissertation title: "Fairness Perception in China (vs. North America) and Cultural Elements in Decision Making". (With start-up company in 2002, previously with InCubeNet).

Jiachu Song, TA, Spring 1993 (In IT firm).

Jeanne Pickering, Computer Science, advancement to candidacy committee, summer 1994.

Maria Lourdes Roldan, AGSM UCLA, research assistant, 1993-95 (Assistant Professor, San Jose State, Associate Dean as of 8-2016)

Brenda Nordenstam, Social Ecology, 1992, advancement to candidacy committee (Assistant Professor, SUNY)

Young Hee Cho, Social Science, 1992-96, supervisor of research assistant, advancement committee. (Assistant Professor, Cal State Long Beach; Professor as of 2013)

Monika Winn, Strategy, 1992-, supervisor of research assistant; 1993, advancement to candidacy committee, 1994 (Tenured Associate Professor as of 7/02, Professor as of 2013, University of Victoria, BC Canada)

Pam Kelyka, Accounting, 1992, phase II committee, dissertation committee, 1995-99 (Assistant Professor, University of Akron, Associate Professor as of 2013)

Stuart Eriksen, ODT PhD student, 1987-90, phase II comm. chair, dissertation comm. chair, "Decision Making with Information from Apparently Non-Comparable Studies" (USC adjunct professor)

Alan Brothers, Social Science, 1989-90, dissertation committee (Battelle Pacific Northwest National Lab)

Diane Roberts, Accounting, 1991-1994, dissertation comm. (Assistant Prof., Univ. of San Francisco)

Ed Schumann, Social Ecology, 1988, advancement to candidacy committee.

William Lambert, Social Ecology, 1987, examination committee (Assistant Professor at University of New Mexico School of Medicine)

Ali Peiravi, Engineering, 1983, dissertation committee

Soheila Jorjani, ODT PhD student, 1983-86, phase II comm. (Professor, Cal State San Marcos)

Ken Poertner, ODT PhD student, 1984-86, phase II committee

Masoud Tehrani, Engineering, 1984, examination committee

Tom Sabol, UCLA, Engineering, 1984-85, dissertation committee

Mahmood Nohi, Engineering, 1985-86, dissertation committee
Maria Hozbor, Chemistry, 1986, advancement to candidacy committee

Faculty Mentor (Recent)

Undergraduate

University Studies 3 Make Smart Choices (Winter '06), freshman seminar; <http://eee.uci.edu/06w/87582/>
Mgt. 183 Quantitative Methods Undergraduate Minor (Fall 1994)
Mgt. 196 Decision Analysis (Spring '20, Winter '21)

PhD

Mgt. PhD 297A Doctoral Proseminar
(Fall '91, '92, '95, F/W 99/00, Fall '00, '03, '09, '10, '11, '12)
Mgt. PhD. 299 Behavioral Decision Theory indep. studies Win. & Spr. 2005, Fall 2013
Mgt. PhD 297T-SWT Decision Theory PhD Research Seminar, Spring '11, '13, '17, '19, '20, Fall '14, '21
Mgt. PhD 291 Decision Theory Doctoral Research Seminar (Falls '04, '06, '08)
Mgt. 290 Decision Theory Doctoral Research Seminar (Sp '88, Sp '99, W '01, W '03)
Mgt. 290 Advanced Topics in Operations & Decision Technologies (co-taught doctoral seminar) (Spring 1995, 1997, Winter 1998)

Full-time MBA

Mgt. 201A Statistics for Management (Fall 1984, 1985, 1986, 1987, 1988, 1996, 1997)
Mgt. 201A Quantitative Methods for Management (Fall 1982)
Mgt. 201B Quantitative Methods for Management (Winter and Spring 1983)
Mgt. 201B Operations Research for Management (Winter 1984; Winter 1992)
Mgt. 201B Management Science (Winter 1995, 1996)
Mgt. 289 Field Studies in Operations Management (Winters 1997, 1998, 2006)
Mgt. 290 Decision Analysis (Spring and Fall 1983; Spring 1986; Winter 1988)
Mgt. 290 Decision Analysis and Creative Problem Solving (Spring 1992, Winter 1993)
Mgt. FT 283 Decision Analysis
(Sp. 2000, Fall 2003, Fall '05, Fall '07, Spr. '10, '12, '13, '16, Winter '14)

Fully Employed MBA

Mgt. FE 201B Operations Research for Fully Employed MBA Students (Spr. 1992, 1993, 1994)
Mgt. FE 290 Decision Analysis for Fully Employed MBA (Fall 1999, Winter 2001)
Mgt. FE 283 Decision Analysis for FEMBA
(Spring '02, '03, '04, '18, Fall '04, '05, '06, Sp.'18, Winter '21)

Executive MBA

Mgt. E 283 Decision Analysis for EMBA (Spring 2003, Spring 2006)

Health Care Executive MBA

Mgt. HC201B Operations Analytics for Healthcare Executives (new title, Fall 2016, '17, '18)
Mgt. HC201B Management Science for HCEMBA (Fall '13, '14, '15, Co-taught W '97 & '98)
Mgt. HC 283 Decision Analysis for HCEMBA
(Sum. '03, Sp '04, Sum.'05, Sum. '08, Spr. '09, '10, '11, '12)
Mgt. 290 Medical Decision Analysis for Health Care Executive MBA (Fall 1999, 2000)

Economics

Field Studies
and Independent Studies

- Fall 2022 Technical advisor- Mgt. 298 Experiential Learning class- FTMBA Field Study team, Johnson & Johnson/Cerenovus. Create a searchable database featuring J&J medical device attributes for future regulatory submissions & product development.
- Fall 2018 Technical advisor- Mgt. 298 Experiential Learning class- FTMBA Field Study team, Mazda. Identify ways to reach millennials in the Takata airbag recall campaign.
- Winter 2018 Technical advisor- Mgt. 298 Experiential Learning class- FTMBA Field Study team, SunPower. In 2011, Total SA and SunPower partnered to create a new global leader in the solar industry. The focus of the project is to conduct an assessment of the US solar market, and explore new market segments for SunPower in the United States, as well as conduct competitive analysis and generate competitive intelligence profiles. <https://us.sunpower.com/company/><https://us.sunpower.com/why-sunpower/>
- Fall 2017 Technical advisor- Mgt. 298 Experiential Learning class- FTMBA Field Study team, Microvention Terumo, Aliso Viejo medical device company (pioneered the development of catheter-based technologies for the treatment of diseases of the brain, <http://www.microvention.com/>). Develop analytical/evaluation tools and frameworks to quantify growth opportunities via acquisitions, licensing, distribution, partnerships/alliances.
- Fall 2016 Technical advisor- Mgt. 298 Experiential Learning class- FTMBA Field Study team, Edison Water Resources, analyze business models to deliver water efficiency and conservation services.
- Spring 2016 Francisco Ugalde, FTMBA- Renewable energy industry analysis.
- Fall 2015 Technical advisor- Mgt. 298 Experiential Learning class- FTMBA Field Study team, RAJ Manufacturing's (Tustin) SwimSpot retail division's strategic evaluation of alternative retail channels
- Fall 2013 Technical advisor- Mgt. 298 Experiential Learning class- FTMBA Field Study team, Parker Aerospace supply chain benchmarking and recommendations
- Spring 2013 Sanket Mehta, FTMBA- Think Tank intern
- F 2012-W 2013 Sri Jaya Sankar Malladi, FTMBA- HireRight intern
- F 2012-W 2013 Kyung "Justin" Chai, FTMBA- Emerson Process Management-Rosemount Analytical intern
- Fall 2012 Nitin Joshi, FTMBA- HireRight intern
- Spring 2012 Anna Gawlicka, HCEMBA, Independent study on "Decision model for cost-effectiveness analysis of probe-based confocal laser endomicroscopy for diagnosis of indeterminate pancreaticobiliary stricture"
- Spring 2012 Dotty Wang, FTMBA, Independent study for Johnson & Johnson on sourcing and procurement. Supervisor: Tiffany Shaw, Category Manager, Advanced Sterilization Products, Johnson and Johnson, 33 Technology Drive, Irvine, CA 92618
- Fall 2011 Technical advisor- Mgt. 298 Experiential Learning class- FTMBA Field Study team. Hyundai Motor America on a brand awareness program for Hyundai's Hydrogen Fuel Cell technology and environmental friendliness
- F 2011-S 2012 Serge Sidorov, FTMBA, NEi Software (finite element analysis)
- Fall 2010 Technical advisor- Mgt. 298 Experiential Learning class- FTMBA Field Study team. Ev3, Irvine, <http://www.ev3.net/about/> on improving the product launch process, sponsored by Tom Whalen, VP Operations, Tamanna Karnani, Director Materials & Planning
- Summer 2010 Undergraduate summer research fellowship (also worked with him in 2010- Dec. 2011) Raymond Wan, undergrad. business major, project on prospect theory, Summer Undergrad. Research Program (SURP)/Undergrad. Research Opportunities Program (UROP) appointment as a SURP Fellow at UCI for Summer 2010. \$1700 award, "Does Prospect Theory Provide Empirically Verifiable Evidence for Understanding How Students at UCI Resolve Decisions under Risk?"
- W 2010- S 2010 Saurabh Tyagi, B/S/H Logistics Intern BSH Home Appliances Corporation, Huntington Beach CA, MBA Independent study internship
- Spring 2010 Geetanjali Singh, FTMBA- Social Enterprise: International Princess Project <http://www.intlprincess.org/>
- Fall 2009 Technical advisor- Mgt. 298 Experiential Learning class- FTMBA Field Study team. Sponsored by Ed Fuller of Marriott, International: Identifying potential corporate partners to preserve Amazon Rain Forest in Brazil in the JUMA Reserve, Group members: Geetanjali Singh, Sudhish Subhash, Gaurav Bahal, Eric Higgins, Sandy Lou

Fall 2008 Technical Advisor- Mgt. 298 Experiential Learning class- FT MBA field study team with Hoag Hospital for Business Plan for Mary and Dick Allen Diabetes Center (MD/MBA students with regular Full-time MBAs on team)

F2008-W 2009 Kristen Parrinello, independent study for Social Enterprise Institute, Betsy Densmore, www.se-institute.org/SEI

Spring 2007 UCI Avian flu planning for undergraduate business program

Independent studies (199's) by undergraduate minors Kyle Addiss and Brian Cho

Winter 2006 Medtronics (pig heart valve supplier management)

Panda (restaurant operations improvement)

Erin Gruwell Education Project (improving Freedom Writers educational program)

Decision Center for a Desert City-ASU (water planning stakeholders analysis)

Spring 2004 John Matelis, decision analysis use at Booz, Allen, Hamilton

Winter 2000 Rong "Elaine" Zhang, WFS Financial Inc., Subsidiary of West Corp. (Data Warehouse Project Management)

Winter 1998 Disneyland Business Planning (Improving Throughput on Major Attractions)

Decision Insights, Inc. (Software prototype for decision analysis on web)

Winter 1997 Disneyland Business Planning. (Replacement Parts Procurement Procedures)

U.S. Bureau of Export Administration. (Process Evaluation)

Spring 1996 Kelly Hamerlinck, Disneyland (Labor Force Scheduling)

Predoctoral Teaching

UCLA Engr. 11 Patterns of Problem Solving (1975-81)

UCLA Engr. 12 Applied Patterns of Problem Solving (1976-81)

(Revised 3/1/22)
